(9) **DIP switch**: To select Audio channels. For details, please see "Audio Channel Selection"

Remark: It gives priority to de-embed digital audio when there is digital audio input and analog audio input at the same time.

Audio Channel Selection

Through switching the DIP switch to de-embed any two audio channels from 8-ch SDI audio. DIP switch position "123" controls one audio channel, DIP switch position "456" controls the other audio channel.

- a. For Analog audio, DIP switch position "123" controls "BALANCED ANALOG OUT1" audio signal; DIP switch position "456" controls "BALANCED ANALOG OUT2" audio signal.
- b. For Digital audio, it will output 2 channels of audio signal, DIP switch position "123" and DIP switch position "456" control one channel of audio separately.

The specific operation as follows:
