

# PROVIDER SERIES HEAD-CLIP AND COUNTRYMAN E6 ATTACHMENT INSTRUCTIONS

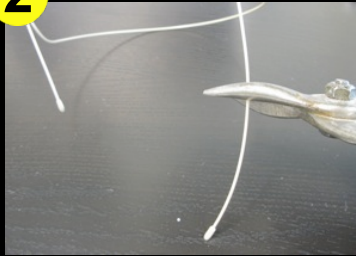

TRANSFORM YOUR COUNTRYMAN E6 MIC  
INTO A DUAL EAR, STABLE HEADWORN MIC.

1

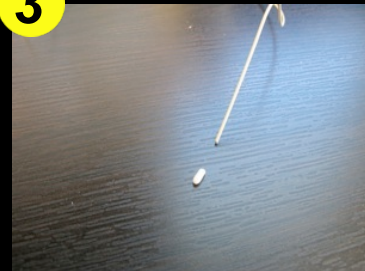

Start by purchasing a Head-Clip from one of our authorized dealers.

2

Take some wire snips and cut off about 2 1/2" inches of wire on the right side (boom side). Make sure you take off the rubber tip to use in step 3.

3

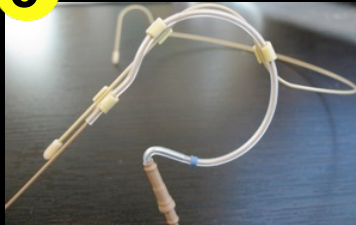

Once cut, take the rubber end cap and place it back on the Head-Clip

4

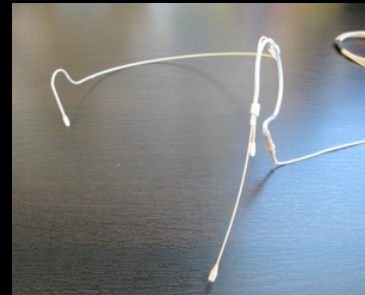

Your finished product should now look like this one above.

5

Take the "Small" E clips that are supplied with the Head-Clip. Snap one side of the E clip onto the E6 first. Then snap on the Head-Clip to the desired position.

Now you have a dual ear Countryman E6 microphone. You can take the Head-Clip and shape it more to your head and mold and shape the E6 to your face. This will give you more stability and less movement on the E6. No more constant adjusting of the 1 ear design.
