# Chapter 1: Introduction

---

## Overview

---

The HD10AM is a dual rate 8 channel AES audio Embedder/Disembedder. The Disembedder is always functional, outputting group 1 and 2—or 3 and 4 (user selectable) when present on the input SDI. This is independent of the embedding process. The Embedder is user selectable, on a channel pair basis, to either “pass” SDI input audio or embed input AES audio from the breakout cable. The ability to pass incoming ancillary data makes it possible to embed up to 16 channels of audio by cascading two units: the first embedding to groups 1/2, and the second embedding to groups 3/4—or vice versa. It also means that any ancillary data packets in compliance with SMPTE 291M will be passed through as-is.

With the SRC DIP switch setting ON, AES inputs are sample rate converted to a 48KHz rate synchronous to the video input.

The HD10AM automatically detects and configures to the input video standard. The *Lock* LED glows red for HD and green for SD formats.

With the SRC DIP switch setting OFF, data packets are passed from the AES inputs to embedded ancillary packets un-altered. This is done according to SMPTE 337M. 48KHz synchronous ancillary packets are disembedded and passed unaltered to the AES outputs regardless of the position of the SRC DIP switch.

All AES3-2003 defined channel status bits are passed through unaltered in both the embed and dis-embed directions—except for the sample rate field, which is always set to 48KHz. The channel status CRC is re-calculated and inserted into the bitstream. This ability, along with a very small audio embed/disembed latency, ensures 100 percent compatibility with Dolby® bitstreams.

# User Controls

The HD10AM has an 8-switch DIP accessible through a cut-out in the bottom of the unit. The DIP switches are used to configure the unit's audio embedding and disembedding, and control ancillary data.

Factory default switch settings are all in the leftmost position.

The exact functions of the DIP switches are described in ["Operation" on page 9](#).

# Installation

---

Typically, HD10AM installation consists of the following:

1. Disconnect +5VDC from the converter.
2. Set the DIP switches for the desired equipment configuration.
3. Connect video equipment to the converter BNCs.
4. Connect the breakout audio cable to the converter.
5. Connect audio equipment to the breakout cable (see [Figure 1](#) for pinouts).
6. Apply power to the converter.

# Chapter 2: Operation

## DIP Switches

The HD10AM DIP switches configure the audio embedding and disembedding functions, and control ancillary data.

*NOTE: DIP Switch 8 (AUX) affects the operation of DIP Switches 1-4.*

## DIP Switch Settings

DIP switch settings used to configure various functions are described below.

**Table 1. HD10AM DIP Switch Setting Descriptions**

| SWITCH | FUNCTION  | DIP Set LEFT (default)   | DIP Set RIGHT   |
|--------|---|--|---|
| 1      | Audio Embedding for Channels 1/2<br>(EMBD 1/2)                        | (ON) Overwrite or embed new channel 1/2 packets.   | (OFF) If AUX (SW 8) is also Left (OFF): Pass any channel 1/2 packets from input SDI.<br><br>If AUX (SW 8) is Right (ON): Delete all packets from input SDI. |
| 2      | Audio Embedding for Channels 3/4<br>(EMDB 3/4)                        | (ON) Overwrite or embed new channel 3/4 packets.   | (OFF) If AUX (SW 8) is also Left (OFF): Pass any channel 3/4 packets from input SDI.<br><br>If AUX (SW 8) is Right (ON): Delete all packets from input SDI. |
| 3      | Audio Embedding for Channels 5/6<br>(EMDB 5/6)                        | (ON) Overwrite or embed new channel 5/6 packets.   | (OFF) If AUX (SW 8) is also Left (OFF): Pass any channel 5/6 packets from input SDI.<br><br>If AUX (SW 8) is Right (ON): Delete all packets from input SDI. |
| 4      | Audio Embedding for Channels 7/8<br>(EMDB 7/8)                        | (ON) Overwrite or embed new channel 7/8 packets.   | (OFF) If AUX (SW 8) is also Left (OFF): Pass any channel 7/8 packets from input SDI.<br><br>If AUX (SW 8) is Right (ON): Delete all packets from input SDI. |
| 5      | Channel Mapping For Embedded Groups<br>(EMBD GRP)                     | Embed to Groups 1/2 as specified in 272M and 299M  | Embed to Groups 3/4 as specified in 272M and 299M   |
|        |   | Refer to <a href="#">Table 2, "DIP SW 5 Embedded Channel Mapping," on page 11</a>  |   |
| 6      | Channel Mapping For Disembedding Groups<br>(DISEMBD GRP)              | Disembed from Groups 1/2 as specified in 272M and 299M)  | Disembed from Groups 3/4 as specified in 272M and 299M  |
|        |   | Refer to <a href="#">Table 3, "DIP SW 6 Disembedded Input Channel Mapping," on page 12</a>   |   |
| 7      | (SRC) Pass input AES audio through the sample rate converters         | (ON) Pass all input AES audio through the sample rate converter before embedding (for example, PCM audio)  | (OFF) Do not pass any input AES audio through the sample rate converter before embedding (for example, Dolby® Digital from a synchronous source)            |
|        |   | NOTE: Switch 7 affects all four inputs. For proper operation with the SRC OFF, the AES input timing must be externally synchronized to the input SDI.                      |   |
| 8      | (AUX) Delete ancillary data from input (affects DIP SW 1-4 functions) | (OFF) Whenever possible (i.e., when audio packets for that group are not being embedded), preserve and pass all incoming ancillary data except packets marked for deletion | (ON) Delete all incoming horizontal and vertical ancillary data before embedding any new audio packets  |
