

## ChannelPlus Model NF-469 RF Notch Filter

The ChannelPlus NF-469 is a RF Notch Filter that blocks incoming cable TV channels 64-70, allowing our most popular modulators to broadcast a channel without interference.

The NF-469 couples to the coax cable TV input on either a splitter or an active video distribution device such as our Bi-Directional Video Amplifiers. Once installed, the NF-469 filters out six cable or UHF channels to make room for three modulated channels. In addition, the NF-469 blocks outgoing signals, such as cameras, from being broadcast outside the home. The NF-469 is a perfect solution for modulation in the ever-increasing bandwidth taken up by Cable Television.

### Specifications:

Dimensions / Weight	3.25" x 1" / .26 lbs.
Frequency Range	469.25 Mhz – 497.25 Mhz
Bandwidth	Channels 64-70 UHF 14-19
Input	F-connector
Output	F-connector
