I SERIES

Subwoofer 600

IS6-112 MEDIUM POWER SINGLE 12-INCH

SUBWOOFER

APPLICATIONS

SMALL TO MEDIUM SIZE VENUES

Houses of Worship · Auditoriums · Restaurants Meeting Rooms · Theaters · Corporate A/V Systems

LARGER SIZE VENUES

Arenas · Stadiums · Night Clubs · Theaters Themed Entertainment · Larger Houses of Worship

DESCRIPTION

I SERIES Subwoofer 600 loudspeakers provide excellent acoustic performance, modular flexibility and elegant aesthetics for modern performance venues. Designed to support the goals of systems integrators and consultants both acoustically and mechanically, I SERIES Subwoofers provide a broad range of sizes and capabilities that can be specifically matched to the needs of any modern venue.

The compact, low-profile single driver I SERIES subwoofers are ideal for distributed or concealed sub-bass and are the perfect choice for ground stack applications. Additionally, each cabinet was carefully designed to provide matching face widths and suspension point locations for seamless integration into flown arrays with I SERIES full-range models when additional LF extension is needed but a compact appearance is required. The broad range of optional low profile fly rails, fly frames and modular array brackets reduces design and installation time while also providing improved aesthetics and nearly limitless integration possibilities.

The IS6-112 is a compact, direct radiating subwoofer with large, balanced ports that provide optimal enclosure tuning and even air pressure distribution to the driver cone, reducing distortion and extending system longevity. A FEA-optimized ferrite motor with long linear excursion capabilities provides deep bass response for the enclosure's diminutive size.

FEATURES

- Long excursion ferrite LF driver with FEA-optimized motor and symmetric movement suspension
- Matched-size enclosure and aligned suspension point for seamless flown array integration
- 700W continuous power handling (2800W peak)
- High sensitivity design minimizes power compression losses and required amplifier size

TECHNICAL SPECIFICATIONS ¹			
Operating Mode	Single Amp		
Operating Environment	Indoor or Weather-Resistant Outdoor		
Operating Range ²	39 Hz to 150 Hz		
Transducer	1 x 12" (305mm) double-treated cone with 4" (102mm) inner/outer wound voice coil, ferrite construction		
Continuous Power Handling ³ @ Nominal Impedance	Single Amp	75V	700W @ 8 ohms (2800W peak)
Nominal Sensitivity ⁴	Half Space Whole Space	@ 1W 100 dB 94 dB	@ 2.83V 100 dB 94 dB
Nominal Maximum SPL ⁵	Half Space Whole Space	Peak 134 dB 128 dB	Continuous 128 dB 122 dB
Equalized Sensitivity ⁶	Half Space Whole Space	@ 1W 96 dB 90 dB	@ 2.83V 96 dB 90 dB
Equalized Maximum SPL ⁷	Half Space Whole Space	Peak 130 dB 124 dB	Continuous 124 dB 118 dB
Recommended Amplifiers	Single Amp	np 700W - 1400W @ 8 ohms, (75V - 106V)	
PHYSICAL			
Input Connection	(2) Screw terminal blocks (4-position)		
Mounting Points	(24) M10 threaded rigging points Indoor; (22 in Outdoor model)		
Environmental	Outdoor: IP55W per IEC 60529 , MIL-STD-810G		
Weight	64 lbs (29.0kg) subwoofer only		
Dimensions H x W x D	14.30" x 14.50" x 21.00" (363 x 368 x 533 mm)		
Finish	Refer to the Technical Drawing		
OPTIONS			
Accessories (Refer to BalancePoint™ Flyware Accessory Guide for complete listing)	Rigging kits include: BFR22: BalancePoint™ Fly Rails; IAF40: Isometric Array Frame; HAB: Sub/Dual 2-Way Horiz. Array; HVS: Multiple Horiz./ Vert. Array Kits with Sub Behind Array Options; DFS: Downfill Splay Kit; TPK: Tight Pack Kit		
Configure-to-Order (CTO)	Custom color; Custom cable lengths on outdoor version

NOTES

- PERFORMANCE SPECIFICATIONS All measurements are taken indoor using a time-windowed and processed to eliminate room effects, approximating an anechoic environment, a distance of 6.0 m. All acoustic specifications are rounded to the nearest whole number. An external DSP with settings provided by Community Professional Loudspeakers is required to achieve the specified performance; further performance gains can be realized using Community's dSPEC226 loudspeaker processor with FIR power response optimization.
- 2. OPERATING RANGE The frequency range in which the axial processed response remains within 10dB of the average SPL.
- 3. CONTINUOUS POWER HANDLING Maximum continuous input voltage (and the equivalent power rating, in watts, at the stated nominal impedance) that the system can withstand, without damage, for a period of 2 hours using an EIA-426-B defined spectrum; with recommended signal processing and protection filters.
- 4. NOMINAL SENSITIVITY Averaged SPL over the operating range with an input voltage that would produce 1 Watt at the nominal impedance and the averaged SPL over the operating range with an input voltage of 2.83 Volts, respectively; swept sine wave axial measurements with no external processing applied in whole space, except where indicated.
- NOMINAL MAXIMUM SPL Calculated based on nominal / peak power handling, respectively, and nominal sensitivity; exclusive of power compression.
- 6. EQUALIZED SENSITIVITY The respective SPL levels produced when an EIA-426-B signal is applied to an equalized loudspeaker system at a level which produces a total power of 1 Watt, in sum, to the loudspeaker subsections and at a level which produces a total voltage, in sum, of 2.83 volts to the loudspeaker subsections, respectively; each referenced to a distance of 1 meter.
- 7. EQUALIZED MAXIMUM SPL The SPL produced when an EIA-426-B signal is applied to an equalized loudspeaker system, at a level which drives at least one subsection to its rated continuous input voltage limit, referenced to a distance of 1 meter. The peak SPL represents the 2:1 (6dB) crest factor of the EIA-426-B test signal.

- AXIAL PROCESSED RESPONSE The axial magnitude response of the complete loudspeaker system and each pass band capable of being driven by an independent amplification channel with recommended signal processing applied. 1/6 octave smoothing applied.
- AXIAL SENSITIVITY The SPL plotted against frequency, in all operating modes and for each pass band capable of being driven by an independent amplification channel, for a 1 Watt swept sine wave, referenced to 1 meter with no signal processing. 1/6 octave smoothing applied.

Data presented on this spec sheet represents a selection of the basic performance specifications for the model. These specifications are intended to allow the user to perform a fair, straightforward evaluation and comparison with other loudspeaker spec sheets. For a detailed analysis of this loudspeaker's performance, please download the GLL file and/or the CLF file from our website: communitypro.com.
