

GATORVILLE 2013

Winter NAMM Edition

Evolution Drum Case Series

- Roto molded drum case featuring a new patented pending design
- Molded-in suspension platforms with foam rubber pads center the drum and suspend it, by contacting the rim at only eight points. This floats the drum inside the case and creates air-space around the drum shell, hardware, and heads
- The case closes securely using 2" wide polypropylene web strap and YKK side-release buckle. Rated at 350lbs tensile strength.
- The octagonal shape creates extra room inside case to accommodate suspension mounts, hardware, and strainer throw-offs. Another benefit of this unique shape is that it features flat outer faces which provide a stable base for resting the case. No more rolling around!
- Extra side crush protection; the top edge of the bottom shell is captured in the lid to prevent side impact from reaching the drum
- Outer case shell design includes ribs for added strength and secure stacking. All sizes stack together and share a common back-edge

Available in a variety of colors, comes standard in black
