

USB Bal Box

USB Balance Box eliminates hum problems when connecting audio from your presentation computer source. Hum can happen anywhere, you don't have to be running your audio signal a long distance. Power supplies, fluorescent lights and all sorts of equipment can cause noise that is picked up by your audio input cables.

The USB Bal box is a self-contained sound card therefore bypasses the internal DAC of the host machine providing a clean sound without pre-emphasis that can be used on headphone drives.

Main Features

- ✓ True audio reproduction
- ✓ Improved bandwidth
- ✓ 600ohm line level driven output
- ✓ Earth (Ground) lift
- ✓ Left/Right XLR output connectors are standard
- ✓ for live events audio
