

WorkLite is a new product line for Interspace Industries. We were asked to come up with a new idea for a light on a desk that will give control, has good quality white light and switchable blue or red light for back stage.

A light for the AV, Rentals and Staging Industry, where all disciplines need directional and controllable light. This is designed to keep working every time it is hauled out of the unit box, drop kicked or sat on. In short a very reliable desk light.

We are very pleased with the clarity of this product – we have used near daylight White LEDs for a colour that's easy on the eye, blue or red for backstage lighting so as not to be obtrusive to the audience & the ability to mix either of these with the white. A stand that allows tilt and various mounting positions as well as free standing.
