

## Onyx Blackbird

The Mackie Onyx Blackbird Premium 16x16 FireWire Recording Interface delivers industry-leading recording quality via eight boutique Onyx preamps and high-end 24-bit/96 kHz conversion in a sleek, rackmount design.

Blackbird is equipped with high-end Cirrus Logic® AD/DA converters offering 114 dB dynamic range (A-weighted), phantom power and built-in DIs on the two front panel “Super Channels”.

The “Super Channels” also provide quick access to crucial recording tools and feature true analog hardware monitoring, in both mono and stereo, for hassle-free zero-latency recording.

The additional mic inputs, onboard 8x8 ADAT and word clock I/O provide easy integration into any digital or analog setup. Blackbird also works as a standalone 8-channel preamp rack.

For more complex sessions, the powerful 18x16 Blackbird Control DSP Matrix Mixer allows for quick mix creation and routing of any input to any output at any volume and pan orientation. Additionally, custom names may be applied to all channels and output mixes for quick, at-a-glance reference and control.

Blackbird is Mac/PC friendly and ready for most major DAWs right out of the box. No DAW? No problem. Blackbird comes standard with Mackie’s Traktion 3™ Music Production Software so you can get started recording right away.

Onyx Blackbird features a “Built-Like-A-Tank” design, with a sleek, powder-coated all-metal chassis.
