

GRAPHITE 49

USB MIDI Controller

Samson's Graphite 49 USB MIDI Controller gives you all the performance and production control you need to get the most out of your music software. Combining an intuitive 49-key semi-weighted keyboard with a feature set that is both useful and accessible, the Graphite 49 is a sleek, powerful tool that allows you to express your most dynamic musical ideas.

The Graphite 49 is designed to feel more like an instrument than a controller. It's semi-weighted keyboard comes equipped with 49 velocity-sensitive keys for capturing the dynamics of a performance, while aftertouch offers customizable control over a variety of effects and parameters. With dedicated Transpose and Octave buttons, as well as classic Pitch and Mod wheels, the Graphite 49 puts a wide range of musical expression at your fingertips.

Take full control of your DAW and virtual instruments with the Graphite 49's nine faders, eight encoders and 16 buttons, all customizable for the ultimate in hands-on control. Players can utilize up to four zones for creating splits and layering sounds. The Graphite 49 also features four large velocity-sensitive trigger pads with aftertouch, each with two banks, that can be used to tap out drum beats, cue one-shot samples or start and stop sequences. And the Graphite 49's large LCD screen displays the behavior of every function in real-time.

The Graphite 49 can be used with your favorite iPad MIDI apps via Apple's iPad Camera Connection Kit or Lightning to USB Camera Adapter. And it's bundled with Native Instrument's Complete Elements software, which offers a vast range of instruments and effects for modern music production, composition and sound design.
