

5 in 1 Reflector Kit

Using your new Reflector

1. Remove the 5-in-1 Reflector from the carry bag and unfold until it forms a flat circle. Please note the zippered cover may be turned inside out exposing multiple colored surfaces.
2. When using the diffuser, place directly between the subject and the sun, making sure to position it far enough over head to completely eliminate all harsh shadows.
3. When using a reflective surface, first find the light source (direct sunlight or studio lighting). Turn the reflector directly into this light source and then aim or bounce back onto your subject. Pay special attention to ensure you are controlling the amount of reflectiveness by moving the reflector forward or backwards.
4. Use of a reflector holder is highly recommended. Visit **fjwestcott.com** and search #302 Reflector Holder to learn more.

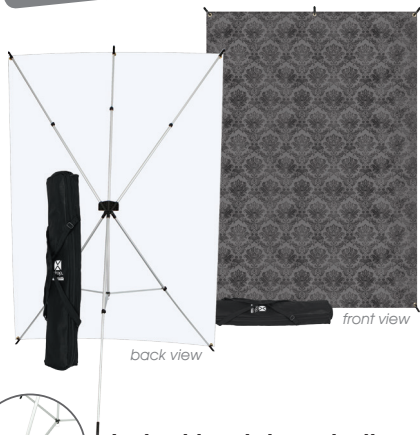

For added assurance, register your reflector at
