—○ 2. INTRODUCTION

Thank you for choosing the Analog Way **Pulse²**. Before you start setting up your **Pulse²** for the first time, please read through all of the documentation to become familiar with its powerful features. The **Pulse²** can be used in several configurations, which results in a versatile video production tool for live event staging and fixed installation applications.

3. TERMS AND DEFINITIONS

BACKGROUND: a “Background” is a source, typically originating from a computer. **Pulse²** enables you to work with still (frame) background — visually in back of all other sources.

LAYER: a “layer” is an image display element (such as a PIP window, Key, logo or Background) that has a visual priority — either in front (or in back) of another layer. 1 frame non-resizable, up to 2 live layers resizable and 2 logos available on the **Pulse²**.

PIP: a “PIP” (Picture In Picture) is a picture, typically of reduced size, which is positioned over another background image or other PIPs. PIPs can be repositioned, reduced, enlarged and displayed with borders. PIPs can overlap, depending on their visual priority. **Pulse²** offers various slides, wipes, and fades for dynamic PIP entrances and exits. A “flying” PIP is also possible using vertical, horizontal, or diagonal movement. A PIP is considered as a layer.

FRAME: a “frame” is a full screen image which is selected from one of the still frames you can capture. A frame can be captured in flash memory from any video or computer source plugged into the machine.

LOGO: a “logo” is a part of a screen image that can be captured in flash memory from any video or computer source, by keying or image cut-out. A logo can be positioned anywhere on the screen.

KEYING: “Key” is an electronic process whereby a video image is electronically superimposed over another source or background, by dynamically removing a portion of the first image. For example, removing all content of a certain color (such as green or blue) is called a Chroma Key, and removing content based on its brightness or luminance levels is called a (Luma Key). Keys are typically used for titles, logos and special effects. **Pulse²** allows you to key a live source (such as a camera shot with green or blue background, or a title with a black background) over any other source or sources.

SEAMLESS: Clean transition with no glitch or loss of sync while switching between two sources. For example, fading through black to another source is a seamless transition.

TRUE SEAMLESS: Clean seamless transitions with no glitch or freeze between two sources. For example, crossfading from source to source is a true seamless transition.

RCS²: Remote Control Software used to control, set up, and operate the device.

QUICK FRAME: The “Quick Frame” feature allows the instant display of a stored frame above all layers.

4. HARDWARE SPECIFICATIONS

4.1 Safety instructions

4.1.1 English

For optimal use of this device, read all safety and operating instructions before use. Keep the safety and operating instructions for future reference. Please follow all of the warnings on this product and its operating instructions.

- **WARNING:** To prevent the risk of electric shock and fire, do not expose this device to rain, humidity or intense heat sources (such as heaters and direct sunlight). Slots and openings in the device are provided for ventilation and to avoid overheating. Make sure the device is never placed near a textile surface that could block the openings. Also keep away from excessive dust, vibrations and shocks.
- **POWER:** Only use the power supply indicated on the device of the power source. Devices equipped with a grounding plug should only be used with a grounding type outlet. In no way should this grounding be modified, avoided or suppressed. Connection of equipment to main supply must be after branch circuit breaker of the building installation.
- **POWER CORD:** The device is equipped with a detachable power cord. To remove mains, switch off the device and disconnect the power cord at appliance coupler.

Caution: The power cord constitutes the only mean to completely disconnect the equipment from the main power.

Apply the following guidelines:

- The equipment connected to the network must have a release system easily accessible and located outside the unit.
- Unplug the power cord; do not pull on the power cord but always on the plug itself.
- The outlet should always be near the device and easily accessible.
- Power supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them.

If the power supply cord is damaged, unplug the device. Using the device with a damaged power supply cord may expose your device to electric shocks or other hazards. Verify the condition of the power supply cords once in a while. Contact your dealer or service center for replacement if damaged.

- **CONNECTIONS:** All inputs and outputs (except for the power input) are Safety Extra Low Voltage (SELV) circuits as defined in UL/IEC 60950-1.
- **SERVICING:** Do not attempt to service this product yourself by opening or removing covers and screws since it may expose your device to electric shocks or other hazards. Refer all problems to qualified service personnel. You may lose warranty when you open the unit.
- **OPENINGS:** Never push objects of any kind into this product through the openings. If liquids have been spilled or objects have fallen into the device, unplug it immediately and have it checked by a qualified technician.

4.1.2 French

Pour une utilisation optimale de cet appareil, nous vous conseillons de bien lire toutes les consignes de sécurité et de fonctionnement avant utilisation. Conservez les instructions de sécurité et de fonctionnement afin de pouvoir les consulter ultérieurement. Respectez toutes les consignes marquées dans la documentation, sur le produit et sur ce document.

- **ATTENTION** : Afin de prévenir tout risque de choc électrique et d'incendie, ne pas exposer cet appareil à la pluie, à l'humidité ou à des sources de chaleur intense.
- **INSTALLATION** : Veillez à assurer une circulation d'air suffisante pour éviter toute surchauffe à l'intérieur de l'appareil. Ne placez pas l'appareil sur ou à proximité d'une surface textile susceptible d'obstruer les orifices de ventilation. N'installez pas l'appareil à proximité de sources de chaleur comme un radiateur ou une poche d'air chaud, ni dans un endroit exposé au rayonnement solaire direct, à des poussières excessives, à des vibrations ou à des chocs mécaniques. Ceci pourrait provoquer un mauvais fonctionnement et un accident.
- **ALIMENTATION** : Ne faire fonctionner l'appareil qu'avec la source d'alimentation indiquée sur l'appareil. Les appareils doivent être obligatoirement connectés sur une source équipée d'une mise à la terre efficace. En aucun cas cette liaison de terre ne devra être modifiée, contournée ou supprimée. Raccordement des équipements à l'alimentation principale doit être postérieur au disjoncteur de branchement de l'installation électrique du bâtiment.
- **CORDON D'ALIMENTATION** : Les appareils sont équipés d'un cordon d'alimentation détachable. La mise hors tension se fait sur appareil éteint en débranchant ce cordon de l'appareil.

Attention : le cordon d'alimentation constitue le seul moyen de débrancher l'appareil totalement de l'alimentation secteur. Pour être certain que l'appareil n'est plus alimenté, ce cordon doit être débranché de la prise murale.

Appliquer les consignes suivantes :

- Le matériel relié à demeure au réseau, doit avoir un dispositif de sectionnement facilement accessible qui doit être incorporé à l'extérieur de l'appareil.
- Débrancher le cordon d'alimentation de la prise murale si vous prévoyez de ne pas utiliser l'appareil pendant quelques jours ou plus.
- Pour débrancher le cordon, tirez-le par la fiche. Ne tirez jamais sur le cordon proprement dit.
- La prise d'alimentation doit se trouver à proximité de l'appareil et être aisément accessible.
- Ne laissez pas tomber le cordon d'alimentation et ne posez pas d'objets lourds dessus.

Si le cordon d'alimentation est endommagé, débranchez-le immédiatement de la prise murale. Il est dangereux de faire fonctionner un appareil avec un cordon endommagé ; un câble abîmé peut provoquer un risque d'incendie ou un choc électrique. Vérifiez le câble d'alimentation de temps en temps. Contactez votre revendeur ou le service après-vente pour un remplacement.

- **CONNEXIONS** : Toutes les entrées et sorties (exceptée l'entrée d'alimentation) sont des circuits de très basse tension de sécurité (TBTS) tels que définis dans UL / IEC 60950-1.
- **RÉPARATION ET MAINTENANCE** : L'utilisateur ne doit en aucun cas essayer de procéder aux opérations de dépannage, car l'ouverture des appareils par retrait des capots ou de toutes autres pièces constituant les boîtiers ainsi que le dévissage des vis apparentes à l'extérieur, risquent d'exposer l'utilisateur à des chocs électriques ou autres dangers. Contactez le service après-vente, votre revendeur ou adressez-vous à un personnel qualifié uniquement. L'ouverture de l'appareil provoque la perte de la garantie.
- **OUVERTURES ET ORIFICES** : Les appareils peuvent comporter des ouvertures (aération, fentes, etc...), veuillez ne jamais y introduire d'objets et ne jamais obstruer ses ouvertures. Si un liquide ou un objet pénètre à l'intérieur de l'appareil, débranchez immédiatement l'appareil et faites-le contrôler par un personnel qualifié avant de le remettre en service.

4.1.3 Italian

Per un utilizzo ottimale dell'apparecchio, leggere tutte le istruzioni di sicurezza e di utilizzo prima dell'uso. Conservare le istruzioni di sicurezza e di funzionamento al fine di poterle consultare ulteriormente. Seguire tutti i consigli indicati su questo manuale e sull'apparecchiatura.

- **ATTENZIONE:** Al fine di prevenire qualsiasi rischio di shock elettrico e d'incendio, non esporre l'apparecchiatura a pioggia, umidità e a sorgenti di eccessivo calore.
- **INSTALLAZIONE:** Assicuratevi che vi sia una sufficiente circolazione d'aria per evitare qualsiasi surriscaldamento all'interno dell'apparecchiatura. Non collocare l'apparecchiatura in prossimità o su superfici tessili suscettibili di ostruire il funzionamento della ventilazione. Non installate l'apparecchiatura in prossimità di sorgenti di calore come un radiatore o una fuoruscita d'aria calda, né in un posto esposto direttamente ai raggi del sole, a polvere eccessiva, a vibrazioni o a shock meccanici. Ciò potrebbe provocare un erraneo funzionamento e un incidente.
- **ALIMENTAZIONE:** Far funzionare l'apparecchiatura solo con la sorgente d'alimentazione indicata sull'apparecchiatura. Le apparecchiature queste devono essere obbligatoriamente collegate su una sorgente fornita di una efficiente messa a terra. In nessun caso questo collegamento potrà essere modificato, sostituito o eliminato. Connessione delle apparecchiature alla rete elettrica deve essere successiva interruttore di circuito dell'impianto dell'edificio
- **CAVO DI ALIMENTAZIONE:** Questo apparecchio è equipaggiato con un cavo di alimentazione. Per rimuoverlo, spegnete l'apparecchio e disconnettere il cavo di alimentazione dalla presa di corrente.

Attenzione: il cavo di alimentazione è il solo modo di disconnettere l'apparecchio dell'alimentazione. Per assicurarsi che totalmente l'apparecchio non è più collegato, il cavo deve essere disconnesso della presa murale.

Seguire le istruzioni seguenti:

- Il materiale collegato a residenza alla rete, deve avere un dispositivo di sezionamento facile da raggiungere e che deve essere inserito all'esterno del apparecchio.
- Disconnettere l'apparecchiatura dalla presa murale se si prevede di non utilizzarla per qualche giorno.
- Per disconnettere il cavo tirare facendo forza sul connettore.
- La presa d'alimentazione deve trovarsi in prossimità dell'apparecchiatura ed essere facilmente accessibile.
- Non far cadere il cavo di alimentazione né appoggiarci sopra degli oggetti pesanti. Se il cavo di alimentazione è danneggiato, spegnere immediatamente l'apparecchiatura.

È pericoloso far funzionare questa apparecchiatura con un cavo di alimentazione danneggiato, un cavo graffiato può provocare un rischio di incendio o uno shock elettrico. Verificare il cavo di alimentazione spesso. Contattare il vostro rivenditore o il servizio assistenza per una sostituzione.

- **CONNESSIONE:** Tutti gli ingressi e le uscite (tranne che per la potenza in ingresso) sono bassissima tensione di sicurezza (SELV) circuiti definiti UL / IEC 60950-1.
- **RIPARAZIONI E ASSISTENZA:** L'utilizzatore non deve in nessun caso cercare di riparare l'apparecchiatura, poiché con l'apertura del coperchio metallico o di qualsiasi altro pezzo costituente la scatola metallica, nonché svitare le viti che appaiono esteriormente, poiché ciò può provocare all'utilizzatore un rischio di shock elettrico o altri rischi. Qualora si apra l'unità, la garanzia non sarà più valida.
- **APERTURE DI VENTILAZIONE:** Le apparecchiature possono comportare delle aperture di ventilazione, si prega di non introdurre mai oggetti o ostruire le sue fessure. Se un liquido o un oggetto penetra all'interno dell'apparecchiatura, disconnetterla e farla controllare da personale qualificato prima di rimetterla in servizio.

4.1.4 German

Zum optimalen Gebrauch dieses Gerätes lesen Sie bitte vorher alle Sicherheits- und Bedienhinweise. Diese Sicherheits- und Betriebsanweisungen für einen späteren Gebrauch sicher aufbewahren. Alle in den Unterlagen, an dem Gerät und hier angegebenen Sicherheitsanweisungen einhalten.

- **ACHTUNG:** um jegliches Risiko eines Stromschlags oder Feuers zu vermeiden, das Gerät nicht Regen, Feuchtigkeit oder intensiven Wärmequellen aussetzen.
- **EINBAU:** Eine ausreichende Luftzufuhr sicherstellen, um jegliche Überhitzung im Gerät zu vermeiden. Das Gerät nicht auf und in Nähe von Textiloberflächen, die Belüftungsöffnungen verschließen können, aufstellen. Das Gerät nicht in Nähe von Wärmequellen, wie z.B. Heizkörper oder Warmluftkappe, aufstellen und es nicht dem direkten Sonnenlicht, übermäßigem Staub, Vibrationen oder mechanischen Stößen aussetzen. Dies kann zu Betriebsstörungen und Unfällen führen.
- **STROMVERSORGUNG:** Das Gerät nur mit der auf dem Gerät bezeichnete Stromquelle betreiben. Gerät mit geerdeter Hauptstromversorgung muss an eine Stromquelle mit effizienter Erdung angeschlossen werden. Diese Erdung darf auf keinen Fall geändert, umgangen oder entfernt werden. Anschluss von Geräten ans Stromnetz muss nach Abzweigschalter des Gebäudes Installation
- **NETZKABEL:** Das Gerät ist mit einem entfernbaren Netzkabel ausgestattet. Um das Gerät vollständig vom Netz zu trennen, schalten Sie es aus und ziehen Sie das Netzkabel ab.

Achtung: Das Netzkabel stellt die einzige Möglichkeit dar, das Gerät vollständig vom Netzanschluss zu trennen. Um sicherzustellen, dass das Gerät nicht mehr versorgt wird, muss dieses Kabel aus der Netzsteckdose ausgesteckt werden.

Bitte beachten Sie die folgenden Hinweise:

- Wenn Geräte dauerhaft am Netz bleiben, müssen sie über eine leicht zugängliche Trennvorrichtung verfügen, die außen am Gerät angebracht sein muss.
- Das Kabel mittels dem Stecker herausziehen. Niemals am Stromkabel selbst ziehen.
- Die Steckdose muß sich in der Nähe des Geräts befinden und leicht zugänglich sein.
- Das Stromkabel nicht fallen lassen und keine schweren Gegenstände auf es stellen.

Wenn das Stromkabel beschädigt ist, das Gerät sofort abschalten. Es ist gefährlich das Gerät mit einem beschädigten Stromkabel zu betreiben; ein abgenutztes Kabel kann zu einem Feuer oder Stromschlag führen. Das Stromkabel regelmäßig untersuchen. Für den Ersatz, wenden Sie sich an Ihren Verkäufer oder Kundendienststelle.

- **ANSCHLÜSSE:** Alle Eingänge und Ausgänge (mit Ausnahme der Stromversorgung) sind Safety Extra Low Voltage (SELV) Schaltungen wie in UL / IEC 60950-1 definiert.
- **REPARATUR UND WARTUNG:** Der Benutzer darf keinesfalls versuchen das Gerät selbst zu reparieren, die Öffnung des Geräts durch Abnahme der Abdeckhaube oder jeglichen anderen Teils des Gehäuses sowie die Entfernung von außen sichtbaren Schrauben zu Stromschlägen oder anderen Gefahren für den Benutzer führen kann. Wenden Sie sich an Ihren Verkäufer, Ihre Kundendienststelle oder an qualifizierte Fachkräfte. Das Öffnen des Gehäuses führt zum Verlust der Garantie.
- **ÖFFNUNGEN UND MUNDUNGEN:** Die Geräte können über Öffnungen verfügen (Belüftung, Schlitz, usw.). Niemals Gegenstände in die Öffnungen einführen oder die Öffnungen verschließen. Wenn eine Flüssigkeit oder ein Gegenstand in das Gerät gelangt, den Stecker herausziehen und es vor einer neuen Inbetriebnahme von qualifiziertem Fachpersonal überprüfen lassen.

4.1.5 Spanish

Para un uso óptimo de este equipo, lea las instrucciones de seguridad y operación antes de utilizarlo. Conserve las instrucciones de seguridad y de funcionamiento para que pueda consultarlas posteriormente. Respete todas las consignas indicadas en la documentación, relacionadas con el producto y este documento.

- **CUIDADO:** Para prevenir cualquier riesgo de choque eléctrico y de incendio, no exponga este aparato a la lluvia, a la humedad ni a fuentes de calor intensas.
- **INSTALACIÓN:** Cerciórese de que haya una circulación de aire suficiente para evitar cualquier sobrecalentamiento al interior del aparato. No coloque el aparato cerca ni sobre una superficie textil que pudiera obstruir los orificios de ventilación. No instale el aparato cerca de fuentes de calor como radiador o boca de aire caliente, ni en un lugar expuesto a los rayos solares directos o al polvo excesivo, a las vibraciones o a los choques mecánicos. Esto podría provocar su mal funcionamiento o un accidente.
- **ALIMENTACIÓN:** Ponga a funcionar el aparato únicamente con la fuente de alimentación que se indica en el aparato. Los aparatos deben estar conectados obligatoriamente a una fuente equipada con una puesta a tierra eficaz. Por ningún motivo este enlace de tierra deberá ser modificado, cambiado o suprimido. Conexión del equipo a la red eléctrica debe ser posterior del interruptor de circuitos derivados de la instalación del edificio
- **CABLE DE CORRIENTE:** El equipo se suministra con un cable de alimentación desmontable. Para desconectar de la red eléctrica, apague primero el equipo y después, desconecte el cable de alimentación de la red eléctrica.

Atención: El cable de alimentación constituye el único medio de desconectar el aparato totalmente de la red eléctrica. Para estar seguro de que el aparato no está más alimentado, este cable debe de ser desconectado de la toma de corriente.

Aplicar las siguientes consignas:

- El material conectado a residencia a la red informática, debe de tener un dispositivo de seccionamiento fácilmente accesible que debe de ser incorporado al exterior del aparato.
- Desconectar el aparato del enchufe mural si no piensa utilizarlo durante varios días.
- Para desconectar el cable, tire de la clavija. No tire nunca del cable propiamente dicho.
- El enchufe de alimentación debe estar cerca del aparato y ser de fácil acceso.
- No deje caer el cable de alimentación ni coloque objetos pesados encima de él.

Si el cable de alimentación sufriera algún daño, ponga el aparato inmediatamente fuera de tensión. Es peligroso hacer funcionar este aparato con un cable averiado, ya que un cable dañado puede provocar un incendio o un choque eléctrico. Verifique el estado del cable de alimentación de vez en cuando. Póngase en contacto con su distribuidor o con el servicio de posventa si necesita cambiarlo.

- **CONEXIONES:** Todas las entradas y salidas (a excepción de la entrada de alimentación) son de tensión extra baja de seguridad (SELV) circuitos definidos en UL / IEC 60950-1.
- **REPARACIÓN Y MANTENIMIENTO:** Por ningún motivo, el usuario deberá tratar de efectuar operaciones de reparación, ya que si abre los aparatos retirando el capó o cualquier otra pieza que forma parte de las cajas o si destornilla los tornillos aparentes exteriores, existe el riesgo de producirse una explosión, choques eléctricos o cualquier otro incidente. Contacte el servicio de posventa, a su distribuidor o diríjase con personal cualificado únicamente. La unidad pierde la garantía si esta ha sido abierta.
- **ABERTURAS Y ORIFICIOS:** Los aparatos pueden contener aberturas (aireación, ranuras, etc.). No introduzca allí ningún objeto ni obstruya nunca estas aberturas. Si un líquido o un objeto penetra al interior del aparato, desconéctelo y hágalo revisar por personal cualificado antes de ponerlo nuevamente en servicio.

4.2 Unpacking and inspection

- 1 x **Pulse²** (PLS350/PLS350-3G/PLS350-H)
- 1 x Power supply cord
- 1 x Ethernet cross cable (for device update)
- 1 x Remote Control Software (RCS²)*
- 1 x Set of 6 audio 5-pin screw terminals
- 1 x Front rack ears (the parts are stowed in the packaging foam)
- 1 x User manual (PDF)*
- 1 x Quick start guide*

* User manual, quick start guide and the RCS² are available on www.analogway.com

Before racking and plugging any inputs and outputs, it is advised to power on the unit. Should you encounter any issue, you must contact immediately your local distributor or dealer, or closest **Analog Way** technical support offices (see chapter: **12. Contact information**).

4.3 Rack mount information

Tabletop mounting: The **Pulse²** can be used directly on a table; the unit is equipped with 4 handy anti-slip rubber feet.

Rack mounting: The **Pulse²** is compatible with a 19" enclosure. Please follow the instructions below to install the device in a 19" rack.

Please put the ears on the unit thanks to the 4 provided screws.

Place the device in your rack. Attach the device to the rack by screwing 2 front ears on it (screws not included). Rear fixing is also recommended, in particular for permanent installations.

Connect all of the cables of the device and attach them to the rack with the help of tie wraps.

IMPORTANT:

- The openings in the side of the device are for cooling. Do not cover these openings to avoid blocking air circulation.
- Be sure that no weight in excess of 2 kg (4.4 Lbs.) is added onto the **Pulse²**.
- The maximum ambient operating temperature should not exceed 40°C (104°F).
- The rack and all mounted equipment in it must be reliably grounded according to national and/or local electrical standards.

Dismantling front handles of the device could invalidate warranty on after-sales services of your **Pulse²**. It is strongly advised to avoid using front handles as rests for your **Pulse²**, they are designed for manipulation purposes only.

If required, front handles of the device can be dismantled, but with caution. The original screws removed must not be reintroduced to their location without handles in place. Substantial damages can occur, including risk of electric shock from the main voltage. Only M4x12mm screws can be used. They are supplied with the unit.

4.4 Cable and adaptor information

A large choice of cables and adaptors are compatible with the **Pulse²**. Please refer to the hardware specifications chapter to find the most suitable cables for your operations.

4.5 Hardware specifications

4.5.1 Signal descriptions

For each type of signal, here are the levels and the impedance accepted by the **Pulse²**.

Analog SDTV

Type	Levels	Impedance
Composite	0,7 Vpp + 0,3 Vpp	75 Ω
S. Video	Y = 0,7 Vpp + 0,3 Vpp C = 0,7 Vpp	75 Ω
YUV	Y = 0,7 Vpp + 0,3 Vpp U = 0,7 Vpp V = 0,7 Vpp	75 Ω
RGsB	R = 0,7 Vpp G = 0,7 Vpp + 0,3 Vpp B = 0,7 Vpp	75 Ω
RGBS	R, G, B = 0,7 Vpp	R, G, B = 75 Ω
	S = 0,3 Vpp 75 Ω or S = TTL	

Digital SDTV

Type	Characteristics
HDBaseT	RGB or YUV – 8 bits – 4.4.4 or 4.2.2 – 16/235
SD-SDI	YUV - 10 bits – 4.2.2 - 270 Mb/s No payload ID management Only A-level type
DVI	RGB ou YUV – 8 bits – 4.4.4 – 16/235 - TMDS
HDMI®	RGB or YUV – 8 bits – 4.4.4 or 4.2.2 – 16/235 – TMDS

Analog EDTV

Type	Levels	Impedance
YUV	Y = 0,7 Vpp + 0,3 Vpp U = 0,7 Vpp V = 0,7 Vpp	75 Ω
RGsB	R = 0,7 Vpp G = 0,7 Vpp + 0,3 Vpp B = 0,7 Vpp	75 Ω
RGBS	R, G, B = 0,7 Vpp	R, G, B = 75 Ω
	S = 0,3 Vpp 75 Ω or S = TTL	

Digital EDTV

Type	Characteristics
DVI	RGB or YUV – 8 bits – 4.4.4 – 16/235 - TMDS
HDBaseT	RGB or YUV – 8 bits – 4.4.4 or 4.2.2 – 16/235
HDMI®	RGB or YUV – 8 bits – 4.4.4 or 4.2.2 – 16/235 – TMDS

Analog HDTV

These formats are compatible with bi-level and tri-level sync on 1 or 3 wires.

Type	Levels	Impedance
YUV	Y = 0,7 Vpp ±0,3 Vpp U = 0,7 Vpp ±0,3 Vpp V = 0,7 Vpp ±0,3 Vpp	75 Ω
RGsB	R = 0,7 Vpp ±0,3 Vpp G = 0,7 Vpp ±0,3 Vpp B = 0,7 Vpp ±0,3 Vpp	75 Ω

Digital HDTV

Type	Characteristics
HDBaseT	RGB or YUV – 8 bits – 4.4.4 or 4.2.2 – 16/235
HD-SDI	YUV - 10 bits – 4.2.2 – 1,485Gb/s and 1,485/1.001Gb/s Only A-level type Input and output payload ID management for HDTV format only
3G-SDI	YUV - 10 bits – 4.2.2 – 2,97Gb/s and 2,97/1.001Gb/s Only A-level type Input and output payload ID management for HDTV format only
DVI	RGB or YUV – 8 bits – 4.4.4 – 16/235 - TMDS
HDMI®	RGB or YUV – 8 bits – 4.4.4 or 4.2.2 – 16/235 – TMDS

Analog computer

Type	Levels	Impedance
RGsB	R = 0,7 Vpp G = 0,7 Vpp + 0,3 Vpp B = 0,7 Vpp	75 Ω
RGSB	R, G, B = 0,7 Vpp	R, G, B = 75 Ω
	S = 0,3 Vpp 75Ω or S = TTL	
RGBHV	R, G, B = 0,7 Vpp	R, G, B = 75 Ω
	H = TTL and V = TTL	

Digital computer

Type	Characteristics
HDBaseT	RGB or YUV – 8 bits – 4.4.4 or 4.2.2 – 0/255
DVI	RGB – 8 bits – 4.4.4 – 0/255 - TMDS
HDMI®	RGB or YUV – 8 bits – 4.4.4 or 4.2.2 – 0/255 – TMDS

4.5.2 Supported video formats

The **Pulse²** can support all the following video formats:

SDTV formats

Standard	Size	Vertical frequency	Horizontal frequency
NTSC	525/480i	59.94Hz/60Hz	15,735 KHz
PAL	625/576i	50Hz	15.625 KHz
SECAM	625/576i	50Hz	15.625 KHz

EDTV formats

Standard	Size	Vertical frequency	Horizontal frequency
480p	525/480p	59.94Hz/60Hz	31.47 KHz
576p	625/576p	50Hz	31.25 KHz

HDTV formats

Standard	Size	Vertical frequency
720p	1280 x 720	23.97Hz/24Hz/25Hz/29,97Hz/30Hz/50Hz/59.94Hz/60Hz
1035i	1920 x 1035	59.94Hz/60Hz
1080i	1920 x 1080	50Hz/59.94Hz/60Hz
1080sF	1920 x 1080	50Hz/59.94Hz/60Hz
1080p	1920 x 1080	23.97Hz/24Hz/25Hz/29,97Hz/30Hz/50Hz/59.94Hz/60Hz

Cinema formats

Format	Size	Vertical frequency
DCDM	2048 x 1080	24Hz

4.5.3 Computer formats

Important: The maximum pixel clock frequency is 165 MHz. Supported formats include 1920x1200 @ 60hz RB, 1600x1200 @60hz RB, 2048x1152 @60hz RB.

4.5.4 Input Computer formats

The **Pulse²** inputs support GTF (version 1.1), CVT (version 1.1) and DMT (version 1.0 rev 12) standards. All others non-standard formats are supported via the custom format capability of the framework.

4.5.5 Output Computer formats

The **Pulse²** outputs support GTF (version 1.1), CVT (version 1.1) and DMT (version 1.0 rev 12) standards. Other non-standard formats are supported via the custom format capability of the framework.

The **Pulse²** offers a list of pre-defined output formats.

Format	Size	Aspect ratio	Frequency	
			50 Hz	60 Hz
VGA	640x480	4/3	Yes	Yes
WVGA	848x480	16/9	Yes	Yes
SVGA	800x600	4/3	Yes	Yes
720p	1280x720	16/9	Yes	Yes
XGA	1024x768	4/3	Yes	Yes
WXGA	1280x768	5/3	Yes	Yes

	1440x900	3/2	Yes	Yes
	1600x900	16/9	Yes	Yes
	1280x960	4/3	Yes	Yes
SXGA	1280x1024	5/4	Yes	Yes
	1360x1024	4/3	Yes	Yes
SXGAP	1400x1050	5/3	Yes	Yes

Format	Size	Aspect ratio	Frequency	
			50 Hz	60 Hz
WSXGAP	1680x1050	16/9	Yes	Yes
1080p	1920x1080	16/9	Yes	Yes
2K	2048x1080	17/9	Yes	Yes
UXGA	1600x1200	4/3	Yes	Yes
WUXGA	1920x1200	16/9	Yes	Yes
	2048x1152	16/9	Yes	Yes

4.6 Input specifications

The **Pulse²** offers 8 seamless inputs. Some inputs contain several plugs.

A plug corresponds to a socket or a connector on the rear panel.

The following types of plugs are available on the rear panel:

- HDBaseT (Only for Ref. PLS350-H)
- HDMI
- Single DVI-D (HDMI compatible),
- 3G/HD/SD-SDI (BNC),
- Universal Analog (HD-15)

The **Pulse²** uses an HDMI plug with a standard mounting screw above the connector. Please see the diagram below. This hole is occupied by a Torx10 screw when you receive the unit. If desired, this screw can be removed and replaced by a compatible aftermarket HDMI plug locking mechanism to ensure a secure HDMI connection. This threaded hole should not be left empty.

This hole is used by a TX10 screw when you receive the unit, if you wish to use an HDMI cable with a security fixing screw you can take this screw off and use your own in order to insure good fixing of your HDMI plug.

Please take a look at the accepted formats regarding the input plug type:

Plug Type	Formats	Signals
HDBaseT input	SDTV – EDTV – HDTV – Computer	Digital SDTV – Digital EDTV – Digital HDTV – Digital Computer
Universal Analog Input	SDTV - EDTV - HDTV - Computer	Analog SDTV - Analog EDTV - Analog HDTV - Analog Computer
DVI-D Input	SDTV - EDTV - HDTV - Computer	Digital SDTV - Digital EDTV - Digital HDTV - Digital Computer
HDMI Input	SDTV - EDTV - HDTV - Computer	Digital SDTV - Digital EDTV - Digital HDTV - Digital Computer
3G/HD/SD-SDI Input	SDTV - HDTV	Digital SDTV - Digital HDTV

WARNING: Only the video and audio signal is processed for the HDMI®, and 3G/HD/SD-SDI inputs; other embedded auxiliary features are not supported or passed through. The embedded audio is processed. All other HDMI® features such as: HDMI Ethernet Channel, Audio Return Channel, 3D, 4K, Content Type, Deep Color and x.v.Color are **NOT** supported.

The **Pulse²-H (only for the reference PLS350-H)** is equipped with two HDBaseT input connectors. In addition of the management of the embedded audio streams, the HDBaseT inputs also support the Ethernet pass-through and the Power Over Ethernet (PoE+ with 48V and 30W) functionalities.

The following table indicates the LED status of the HDBaseT input plugs:

Status	LINK (green color)	HDMI (orange color)
LED off	No Link	No HDMI Video
Low Blink	Ethernet Fallback Mode	Not Applicable
Medium Blink	Low Power Mode without Ethernet	HDMI content without HDCP encryption
Fast Blink	Low Power Mode with Ethernet	Not Applicable
LED on	HDBaseT Link	HDMI content with HDCP encryption

Each input can display only one active plug at a time. It is instantly available on the device and can be displayed simultaneously on many layers or outputs, with different sizes and positions.

Standard	Size	HD-15	3G-SDI	HDMI	HDBaseT	Single-Link DVI-D

Note:

1) Reduced Blanking

4.7 Output specifications

4.7.1 Standard output

For the reference **PLS350** and **PLS350-3G**, the **Pulse²** has two standard outputs.

The standard output contains:

- Analog Computer/Video (HD15),
- HDMI output over a DVI-I connector or DVI-I output (DVI-Analog and DVI-Digital).

VGA

DVI-I

Please see the formats available on the output:

Output Type	Format	Signal
Analog Computer	HDTV Computer	Analog HDTV Analog Computer
DVI-I Output	HDTV Computer	Digital HDTV Digital Computer

For the reference **PLS350-H**, the **Pulse²** has two standard outputs which are for each output :

- HDMI connector
- HDBaseT connector

The following table indicates the LED status of the HDBaseT output plugs:

Status	LINK (green color)	HDMI (orange color)
LED off	No Link	No HDMI Video
Low Blink	Ethernet Fallback Mode	Not Applicable
Medium Blink	Low Power Mode without Ethernet	HDMI content without HDCP encryption
Fast Blink	Low Power Mode with Ethernet	Not Applicable
LED on	HDBaseT Link	HDMI content with HDCP encryption

The IR and Serial connectors associated to the HDBaseT connector are described in section 4.8.4.

4.7.2 Video output

For the references **PLS350-3G** and **PLS350-H**, the Pulse² has one video output. This video output contains:

- 3G/HD/SD-SDI (BNC).

Output Type	Format	Signal
3G/HD/SD-SDI Output	SDTV	Digital SDTV
	HDTV	Digital HDTV
	Cinema	DCDM 2K

4.8 Communication specifications

4.8.1 Serial interface

A standard RS232 interface is available through a DB9 female connector:

- It permits controlling the device
- It permits updating the device

Data Rate: 1200 to 115200 Bauds, 8 data bits, 1 stop bit, no parity bit, no flow control by default.
DTR & RTS needed for firmware upgrade.

4.8.2 LAN interface

A standard LAN interface is available through a RJ-45 connector

- It permits controlling the device
- It permits transferring configuration
- It permits connectivity with the RCS² application
- It permits updating the device

4.8.2.1 Protocol

Protocol	Availability
TCP	Yes
UDP	Yes

4.8.2.2 IP address

Address allocation	Availability
Static user defined address	Yes

Default IP address: 192.168.2.140

4.8.3 HDBaseT LAN interface

The HDBaseT input and output connectors of the Pulse² (reference **PLS350-H**) can manage an Ethernet passthrough signal.

A specific LAN over HDBaseT connector is available on the Pulse² to be connected to the dedicated network.

The HDBaseT LAN could not be used to manage the device.

4.8.4 IR and SERIAL HDBaseT interface

Associated to each HDBaseT output connectors, the 5-pin MCO connector can passthrough the one-way InfraRed and the Bidirectional Serial RS232 signals to the HDBaseT output interface.

The pins #1 to #3 are used for the HDBaseT Serial RS232 connection, respectively for the transmission (TX), the reception (RX) and the Ground RS232 signals.

The pins #4 and #5 of the MCO connector are dedicated for the HDBaseT IR signal, respectively for the reception (RX) and for the Ground signals.

Please note that some IR sensors could have a low power signal which could not be compatible with the expected IR input characteristics of the Midra™. In case of issue, make sure to use professional IR controller.

4.9 Environmental specifications

For PLS350 and PLS350-3G:

Dimensions:

- ▶ D 15.75" x W 19" x H 3.46" with rack mount and handles
- ▶ D 400 mm x W 483 mm x H 88 mm

- ▶ D 14.17" x W 17.3" x H 3.46" without rack mount and handles
- ▶ D 360 mm x W 440 mm x H 88 mm

Weight:

- ▶ 6,3kg / 13.9 lb
(Compatible with a Standard 19" rack, Height = 2 U)

- Cooling air flows from right side to left side.
- Max ambient operating temperature: < 40°C (< 104°F).
- Operating temperature: 0 to +40°C / +32°F to +104°F
- Storage temperature: -40 to +70°C / -40°F to +158°F
- Operating humidity: 10 to 80% (non condensing)
- Input voltage range: 100-240 VAC autosensing, 50/60 Hz
- Typical consumption: 110 W

ELECTRICAL SECURITY:

- IEC 60950-1:2005 (2nd Edition); Am 1:2009
- EN 60950-1:2006 + A1:2010 + A11:2009 + A12:2011, CSA C22.2; National Differences specified in the CB Test Report
- UL listed (Canada & US)

ELECTROMAGNETIC COMPATIBILITY:

- IEC 61000-3-2 (2009)
- IEC 61000-3-3 (2008)
- CISPR22 (2008)
- CISPR24 (2010)
- FCC Part15 of 2012
- IEC60321-1 of August 2012

ENVIRONMENT:

- RoHS
- WEEE

USE/TRANSPORT:

- ETS 300 019-2-2: Environmental conditions and environmental tests for telecommunications equipment ; Part 2-2 : specification of environmental tests ; Transportation ; Specification T 2.3: Public transportation
- ETS 300 019-2-3: Environmental conditions and environmental tests for telecommunications equipment ; Part 2-3 : specification of environmental tests ; Stationary use at weather protected locations ; Specification T 3.1 and T 3.1 E: Temperature-controlled locations

If your device should lose power unexpectedly, you may lose any unsaved settings.

For PLS350-H:

Dimensions:

- ▶ D 18.70" x W 19" x H 3.46" with rack mount and handles
- ▶ D 475 mm x W 483 mm x H 88 mm
- ▶ D 17.71" x W 17.3" x H 3.46" without rack mount and handles
- ▶ D 450 mm x W 440 mm x H 88 mm

Weight:

- ▶ 7.2kg / 15.87lb
(Compatible with a Standard 19" rack, Height = 2 U)

- Cooling air flows from right side to left side.
- Max ambient operating temperature: < 40°C (< 104°F).
- Operating temperature: 0 to +40°C / +32°F to +104°F
- Storage temperature: -40 to +70°C / -40°F to +158°F
- Operating humidity: 10 to 80% (non condensing)
- Input voltage range: 100-240 VAC autosensing, 50/60 Hz
- Typical consumption: 155 W (with 2x24w PoE)

ELECTRICAL SECURITY:

- IEC 60950-1:2005 (2nd Edition); Am 1:2009
- EN 60950-1:2006 + A1:2010 + A11:2009 + A12:2011, CSA C22.2; National Differences specified in the CB Test Report
- UL listed (Canada & US)

ELECTROMAGNETIC COMPATIBILITY:

- IEC 61000-3-2 (2009)
- IEC 61000-3-3 (2008)
- CISPR22 (2008)
- CISPR24 (2010)
- FCC Part15 of 2012
- IEC61000-4-2 of August 2012

ENVIRONMENT:

- RoHS
- WEEE

USE/TRANSPORT:

- ETS 300 019-2-2: Environmental conditions and environmental tests for telecommunications equipment ; Part 2-2 : specification of environmental tests ; Transportation ; Specification T 2.3: Public transportation
- ETS 300 019-2-3: Environmental conditions and environmental tests for telecommunications equipment ; Part 2-3 : specification of environmental tests ; Stationary use at weather protected locations ; Specification T 3.1 and T 3.1 E: Temperature-controlled locations

If your device should lose power unexpectedly, you may lose any unsaved settings.

4.10 HDCP management

4.10.1 Input HDCP detection

The input HDCP detection is managed by the input components according to HDCP specification.

4.10.2 Output HDCP detection

The **Pulse²** manages the output HDCP detection according to one of the following criteria:

- Hot plug,
- 3-second period attempt.

4.10.3 Keys' checking

Keys' checking is performed according to the most restrictive condition among the 2 following ones:

- Every 2 seconds
- Every 128 frames

4.10.4 Output management

HDCP protected content can be displayed only on HDCP protected outputs or displays. Therefore, whenever an HDCP protected source is placed into a layer routed to a non-protected output, the **Pulse²** will not output the protected content on this non-protected output, and the layer will be grayed.

If possible, the **Pulse²** will allow to display all other non-protected contents, otherwise the entire output will be muted until the protected content is no longer routed.

4.10.5 HDCP Classification

Class	Support
HDCP Receiver	Yes
HDCP Transmitter	Yes
HDCP Repeater	No

HDCP Receiver

The HDCP negotiation can be enabled or disabled on all HDCP inputs.

HDCP Transmitter

The HDCP negotiation can be enabled or disabled on all HDCP outputs.

The **Pulse²** can manage HDCP repeaters on its outputs: up to 32 display devices can authenticate simultaneously on each output.

4.10.6 Status

In order to permit quick identification of all the HDCP operations on the device, the **Pulse²** provides a full set of status summary to help the user with the HDCP management:

- A front panel menu that displays all the general HDCP status of all inputs and outputs

5. CONNECTING THE PULSE²

5.1 Description

5.1.1 Rear panel Pulse² - Ref. PLS350

1. **Power supply:** 100-240 VAC 2.5A 50/60HZ / FUSE F4A 250 VAC; internal, autoswitchable; 110W
2. **3G/HD/SD-SDI:** SDI #1 to #2
3. **S/PDIF:** audio inputs #1 to #2
4. **MCO male connector:** for audio inputs (balanced) #1 to #4
5. **MCO male connector:** for audio outputs (balanced) #1 to #2
6. **S/PDIF:** audio outputs #1 to #2
7. **Universal Analog Computer TV/HDTV:** inputs #1 to #4
8. **DVI connectors:** DVI-D inputs #1 to #4. Capability to receive digital audio signal from HDMI connector via an adaptor (HDMI-compatible)
9. **Ethernet plug**
10. **HDMI connectors:** HDMI inputs #3 & #4 / HDMI 1 & HDMI 2
11. **Communication port:** communication port with DB9 female connector
12. **Universal Analog Computer TV/HDTV:** HD15 outputs #1 to #2
13. **DVI connectors:** DVI-I outputs #1 to #2. Capability to transmit digital audio signal towards a HDMI connector via an adaptor (HDMI-compatible)

5.1.2 Front panel Pulse² - Ref. PLS350

1. Front panel display: 4-line VFD

2. Menu scroll knob

3. Layer selection:

- **Frame:** un-scaled layer for still frames
- **Logo 1/2:** un-scaled, positionable layer for still logos
- **Layer A/B:** scaled positionable layers for live sources

4. Input selection:

- **1 to 4:** access source 1 to 4, select frame/logo 1 to 4
- **HDMI 1/2:** access HDMI 1 or HDMI 2, select frame/logo 5 to 6
- **SDI 1 to SDI 2:** access SDI 1 to SDI 2, select frame/logo 7 to 8

5. Layer:

- **Black:** clear the layer
- **Freeze:** freeze/unfreeze the input selected in the currently selected layer

6. Matrix mode: #1 to #2: select the output #1 or #2, a layer and a source, then press TAKE

7. Quick Frame: allows to quickly display a foreground Frame

8. On/Off - Stand-by: hold for 3 seconds for stand-by mode

9. Control: Exit/menu: Home menu or back one level - **Enter:** validate the menu or command

10. Shortcut:

- **Effect:** shortcut to transition menu
- **Preset:** recall a custom stored preset
- **Split Screen:** load a split screen preset
- **Swap:** exchange sources between layer A and layer B

11. TAKE: transition the pre-selected sources onto the Program output with the selected effects

5.1.3 Rear panel Pulse² - Ref. PLS350-3G

1. **Power supply:** 100-240 VAC 2.5A 50/60HZ / FUSE F4A 250 VAC; internal, autoswitchable; 110W
2. **3G/HD/SD-SDI:** SDI #1 to #2
3. **S/PDIF:** audio inputs #1 to #2
4. **MCO male connector:** for audio inputs (balanced) #1 to #4
5. **MCO male connector:** for audio outputs (balanced) #1 to #2
6. **S/PDIF:** audio outputs #1 to #2
7. **Video out connector:** 1x BNC-F: 3G/HD/SD-SDI (with audio embedded)
8. **Universal Analog Computer TV/HDTV:** inputs #1 to #4
9. **DVI connectors:** DVI-D inputs #1 to #4. Capability to receive digital audio signal from HDMI connector via an adaptor (HDMI-compatible)
10. **Ethernet plug**
11. **HDMI connectors:** HDMI inputs #3 & #4 / HDMI 1 & HDMI 2
12. **Communication port:** communication port with DB9 female connector
13. **Universal Analog Computer TV/HDTV:** HD15 outputs #1 to #2
14. **DVI connectors:** DVI-I outputs #1 to #2. Capability to transmit digital audio signal towards a HDMI connector via an adaptor (HDMI-compatible)

5.1.4 Front panel Pulse² - Ref. PLS350-3G

1. Front panel display: 4-line VFD

2. Menu scroll knob

3. Layer selection:

- **Frame:** un-scaled layer for still frames
- **Logo 1/2:** un-scaled, positionable layer for still logos
- **Layer A/B:** scaled positionable layers for live sources

4. Input selection:

- **1 to 4:** access source 1 to 4, select frame/logo 1 to 4
- **HDMI 1/2:** access HDMI 1 or HDMI 2, select frame/logo 5 to 6
- **SDI 1 to SDI 2:** access SDI 1 to SDI 2, select frame/logo 7 to 8

5. Layer:

- **Black:** clear the layer
- **Freeze:** freeze/unfreeze the input selected in the currently selected layer

6. Matrix mode: #1 to #2: select the output #1 or #2, a layer and a source, then press TAKE

7. Quick Frame: allows to quickly display a foreground Frame

8. On/Off - Stand-by: hold for 3 seconds for stand-by mode

9. Control: Exit/menu: Home menu or back one level - **Enter:** validate the menu or command

10. Shortcut:

- **Effect:** shortcut to transition menu
- **Preset:** recall a custom stored preset
- **Split Screen:** load a split screen preset
- **Swap:** exchange sources between layer A and layer B

11. TAKE: transition the pre-selected sources onto the Program output with the selected effects

5.1.5 Rear panel Pulse² - H - Ref. PLS350-H

1. **Power supply:** 100-240 VAC 2.5A 50/60HZ / FUSE F4A 250 VAC; internal, autoswitchable; 110W
2. **3G/HD/SD-SDI:** SDI #1 to #2
3. **S/PDIF:** audio inputs #1 to #2
4. **MCO male connector:** for audio inputs (balanced) #1 to #4
5. **MCO male connector:** for audio outputs (balanced) #1 to #2
6. **S/PDIF:** audio outputs #1 to #2
7. **3G/HD/SD-SDI Video out**
8. **HDMI connectors:** HDMI inputs #1 and #2 / HDMI #1 and HDMI #2
9. **HDBase-T connectors:** HDBaseT inputs #1 and #2
10. **DVI connectors:** DVI-D inputs #3 and #4. Capability to receive digital audio signal from HDMI connector via an adaptor (HDMI-compatible)
11. **Universal Analog Computer TV/HDTV:** inputs #3 and #4
12. **HDBaseT ethernet connector:** connector for HDBaseT LAN
13. **Ethernet connector:** connector for remote control LAN
14. **HDBaseT connectors:** HDBaseT outputs #1 and #2
15. **HDMI connectors:** HDMI outputs #1 and #2
16. **Communication port:** communication port with D89 female connector
17. **5-PIN MCO male connectors:** HDBaseT 5-pin MCO connectors output #1 and #2 for InfraRed and Serial HDBaseT communication signals

5.1.2 Front panel Pulse²-H - Ref. PLS350-H

1. Front panel display: 4-line VFD

2. Menu scroll knob

3. Layer selection:

- **Frame:** un-scaled layer for still frames
- **Logo 1/2:** un-scaled, positionable layer for still logos
- **Layer A/B:** scaled positionable layers for live sources

4. Input selection:

- **1 to 4:** access source 1 to 4, select frame/logo 1 to 4
- **HDMI 1/2:** access HDMI 1 or HDMI 2, select frame/logo 5 to 6
- **SDI 1 to SDI 2:** access SDI 1 to SDI 2, select frame/logo 7 to 8

5. Layer:

- **Black:** clear the layer
- **Freeze:** freeze/unfreeze the input selected in the currently selected layer

6. Matrix mode: #1 to #2: select the output #1 or #2, a layer and a source, then press TAKE

7. Quick Frame: allows to quickly display a foreground Frame

8. On/Off - Stand-by: hold for 3 seconds for stand-by mode

9. Control: Exit/menu: Home menu or back one level - **Enter:** validate the menu or command

10. Shortcut:

- **Effect:** shortcut to transition menu
- **Preset:** recall a custom stored preset
- **Split Screen:** load a split screen preset
- **Swap:** exchange sources between layer A and layer B

11. TAKE: transition the pre-selected sources onto the Program output with the selected effects

6. CONTROLLING THE PULSE²

The **Pulse²** can be controlled and operated either via the Front Panel, from your computer via the RCS², or via one of our Event Controllers. (Control of the **Pulse²** can also be integrated into automation and control systems, contact your local technical support for more details.)

6.1 RCS² requirement

The recommended requirements are:

- Adobe Air[®]
- 1Gb Ram
- 200Mb of free space
- 100Mb Network adaptor or above
- 1920x1080 optimized screen resolution
- 1366x768 as the minimum screen resolution.

Operating system:

- Windows XP SP3 or above
- Mac OS v10.7 or above
- Ubuntu v10 or above
- Linux OS 11 or above

For Linux users:

The RCS² is an Adobe[®] AIR[®] application that requires the most recent version of this runtime. As Adobe[®] AIR[®] is no longer supported for desktop Linux distributions, please use a dedicated software such as WINE to use applications designed for Microsoft Windows on your operating system.

1. First, install a Microsoft Windows compatibility layer software on your Linux PC.
2. Then install the Adobe[®] AIR[®] last release using your emulator
3. Finally, install the RCS² using your emulator.

You are ready to use the RCS².

6.2 Connecting with the RCS²

The RCS² is an Adobe Air application that runs on your computer. Before you can connect to your device, you must first download and install Adobe Air, then download and install the RCS² on your computer.

In order to connect the RCS² to the device, you need to use a LAN connection. Use a crossover cable if you connect your computer directly to the unit, or use straight cables if you are connecting through a switch or hub.

Before switching ON the unit, please plug a LAN cable on the rear panel into the Ethernet port. Then switch ON the unit.

By default, the network settings on the **Pulse²** are

Default IP Address: 192.168.2.140

Default Subnet Mask: 255.255.255.0

Default port: 10500

To be able to connect to this address, your computer will need to be configured to use a unique IP address on the same network. If this setup will be part of a larger network with other devices, please check with your network administrator before plugging these devices into the network to avoid any IP address conflicts.

For example, you could assign the following static IP address to your computer:

Example Computer IP address: 192.168.2.50

Example Computer Subnet Mask: 255.255.255.0

To download the Remote Control Software, please visit our website and go into the product section. Then, into the download link, please download the RCS² associated to your product. Install it and then open. Here is the startup screen.

Enter the IP address of the device and then the remote port.
Click on **Connect** to start the connection.

Once connected, you have access to this screen:

In case of difficulties:

- Verify that you are using the correct network cable and that it is free from defects. (Crossover or straight cable as required.)
- Check the IP address of both the device and the computer. It must have a unique IP address on the same network as your **Pulse²**. You may need to manually configure a static IP address for your computer in your computer's network configuration.
- You may need to temporarily disable any other networks on the computer, such as turning off the wifi connection.
- Close the RCS².
- Restart the RCS².

Once your computer has established connection, the RCS² control panel will begin to load, and will begin to synchronize with the device. When the small "Sync" icon at the bottom right of the display has turned green, the RCS² software is ready to use.

Some computers use an energy saving mode that turns off the network adaptor during periods of inactivity. To avoid the inconvenience of reconnecting the software during use, please ensure your network adaptor remains active by disabling the energy saving mode.

6.3 RCS² top menu

6.3.1 Setup

The Setup page is where you will review and modify the device configuration, such as output resolutions, input settings, and more.

6.3.2 Edit

The Edit mode is the place where you will manage preset creation. You will make input selections, manage your inputs, adjust the layer attributes such as size, position, effect, etc. You can save all your screen configurations into presets, as well as review and recall them on each individual screen.

6.3.3 Live

The Live mode is the section where you will operate your show. You can quickly recall presets or make input selections, as well as setup a sequence of presets that can run continuously with custom durations, or wait for user interaction.

7. OPERATING THE PULSE² FROM THE RCS²

7.1 Operating mode

Before you start setting up your **Pulse²** for the first time, take some time to think about how you will be using it. The **Pulse²** offers a choice of two operating modes, which results in a versatile video production tool for live event staging and fixed installation applications.

NOTE: We recommend resetting the device to its default values every time you set up your shows or events.

7.2 Setup

Go to the setup section to start to set up your unit. A Setup assistant is available to help you to correctly adjust all basic setups of your unit.

***Video out: not available for Ref. PLS350**

7.2.1 Mode

The device can work in 2 different modes, Mixer mode or Matrix mode.

Mixer mode

This mode allows for a single **Pulse²** to seamlessly switch any of its 8 analog/digital inputs with any other of the inputs, add PIP, titling or logo insertion to the live frame, while previewing your every move before going live, to avoid embarrassing errors on your main screen.

Matrix mode

This mode turns your **Pulse²** into a true 8 x 2 scaled matrix, while preserving seamless switching capabilities. Program 1 and Program 2 outputs can be set to different resolutions and rates. Switching between any of the inputs can be done with the various effects (Cut, Fade, Slides...) and synchronized on both outputs.

7.2.2 Audio

In this section, you will setup the audio of your device, you have several modes. In all modes, you have the possibility to output the audio in AES3 or SPDIF:

NO AUDIO: the audio of your device is switched off

PRESET MODE: the standard mode of use of the device

You have two possibilities:

- **Top layer:** the sound on the output will follow the audio input of the top layer.
- **Breakaway:** when breakaway is activated, the audio on the output is memorized into the preset. A change of preset, changes the audio on the output. A change of content into a video layer has no effect on the audio.

ROUTING MODE: in this configuration, simply choose an audio input to assign it to the output. The audio configuration remains the same during the show.

In this example input1 is on out1 and input 2 is on out 2.

7.2.3 Screens

In the screen configuration, you will find the state of your screen. It indicates the screen resolution, the maximum number of layers you can use.

You will find configuration for the Quick Frame and the background color too. The Quick Frame will be your emergency frame that can be displayed in front of every layer. Here, select the frame slot number to be displayed as the Quick Frame. If you are in Matrix mode, you have 2 screens status.

7.2.4 Preview

Into the PREVIEW section, you have the possibility to enable or not the PREVIEW aspect.

PRESET ASPECT: disabling this option disable the Preview indications on your Preview monitor, such as the blinking layer wireframe, and source number.

7.2.5 Misc - Only for the Pulse2 - Ref. PLS350-3G & Ref. PLS350-H

In the **GENERAL SETTING** section, you have access to:

- DYNAMIC FIT:** enable or disable the automatic recognition of black band for digital content. The size and the aspect ratio of the layer are automatically adapted.
- FREEZE MODE:** choose to freeze all inputs or only one input when you use the freeze function.
- PIP BACKGROUND COLOR:** here you chose the automatic color of PIP background, black is the default color.

In the **VIDEO SETTING** section, you have access to:

RECORDING: allow to configure the video output. Configuration shall be done in section 7.2.9.

OUTPUT#1 PLUGS: auto configure the video output as a copy of the output #1

OUTPUT#2 PLUGS: auto configure the video output as a copy of the output #2

7.2.6 Output management

Into the output section, you will be able to manage your output resolutions, formats, sync types, test patterns, etc. On the **SETUP > OUTPUT TAB**, the following screen will appear:

A short summary of each output settings appears on the main page. You can see the number of outputs, their resolution, rate and HDCP status. Select an output to adjust by either clicking on it from the column on the left, or clicking the configuration cog icon for that output.

Once the individual output setup page is opened, you have access to:

- **MODE:** choose your rate generation mode, internal (free-running within the unit) or Framelock by choosing an input as a reference input,
- **FORMAT:** choose the output resolution format,
- **RATE:** choose the signal timing standards, if the mode is set to internal
- **STATUS:** the status menu will show you the current output status,
- **APPLY:** click on this button to apply the new format/rate,
- **PLUG STATUS:** indicates the status of the attached monitor and confirms connectivity,
- **TYPE:** you can choose the type of output synchronization on the analog plug, for example RGB for sync on green, or RGBHV for separate H and V sync wires,
- **HDMI as DVI:** select this box to force the output to DVI mode instead of the default HDMI autosense mode. When in DVI mode, no embedded audio will be transmitted,
- **PATTERN:** a selection of patterns is available to test your output. These patterns will override any input selection that you might have.
You can choose from:
 - **No Pattern** – turns the pattern off
 - **Vertical or horizontal Grey Bars** – displays grey bars
 - **Vertical or horizontal Color Bars** – displays color bars
 - **Grid** – displays an 8x8 box grid pattern
 - **SMPTE bars** – displays the SMPTE color bar pattern
 - **Vertical Burst** – displays alternating black and white 1 pixel wide columns
 - **Centering** – displays a 1 pixel wide dotted line at the edge of the output (only available for computer formats)
 - **Vertical or horizontal gradient** – displays a 0 to 100% gradient pattern.
- **FLICKER:** choose the value of the flicker filter to remove the flicker effect on your interlaced output screen,
- **GAMMA:** increase or decrease the gamma of your output,
- **HDCP:** enable/disable and see the HDCP status.

Depending on the output format chosen, only relevant settings will appear.

Custom format

The device offers the possibility to create your own output format:

Choose CVT mode (restricted settings) or FULL mode (full settings) and start to create your format by adjusting the Horizontal Vertical pixels, frame rates and reduced blanking.

Click on CHECK to verify if your format is a valid signal. You can SAVE and LOAD your Custom format.

7.2.7 Input management

Once your outputs are configured, you have now to configure the inputs connected to your device.

Under the inputs section, you can view your inputs **by active plugs** or **by all plugs** (active and inactive).

In both cases, an **AUTOSET ALL** can be launched to set up automatically your inputs.

Once the **AUTOSET ALL** is done, you can check one by one your inputs and see if they were correctly detected by checking the input **STATUS**. The input **STATUS** is defined by a **FORMAT** and a **RATE**. If that information is not available, your input has not been properly detected or set up.

In this case, you can enter manually into each input settings by using the left menu:

Under the **SIGNAL** tab, you will find:

- **ACTIVE PLUG:** select the plug used by the unit at the moment. Only this plug can be displayed on your output.
- **SETUP PLUG:** select the plug you want to set up, all changes will be applied to this plug, even if this plug is active or not (do not mismatch with the active plug).
- **SIGNAL TYPE:** define the type of your signal, video SD/HD YUV/RGB or Computer HV/SOG etc.
- **ENABLE:** enable/disable the input.
- **REF SYNC:** affect the input to the ref sync input. Use this box only if your source is genlocked with the referenced source (framelock feature).
- **LABEL:** rename your input according to your source.
- **AUDIO MAPPING:** select the audio input that will be linked with the video input.
- **EMBEDDED SIGNAL AUDIO:** status indicates if an embedded audio signal is detected or not.
- **STATUS:** format and size of the input. For the HDBaseT input, the status also provides the Signal Quality of the HDBaseT link.

- **CONTROL: Black:** select Black to transform your input in a uniform color (black).
- **Freeze:** use this button to freeze the specific input,
- **EDID:** choose the EDID for the selected plug.

Under the **HDCP** section, you can:

- Enable/disable the HDCP communication feature
- Read the HDCP status, If the HDCP status says Active, this output connection is currently utilizing HDCP to protect the signal. if the HDCP status indicates Idle, this output connection is currently not utilizing HDCP.

Next is the **IMAGE** tab, where you can find all settings about the display of your input:

Under the **COLORIMETRY** section, you have:

- **BRIGHTNESS:** define the selected input luminosity level,
- **CONTRAST:** define the selected input contrast level,
- **COLOR:** define the selected input color level (0:black and white, full: full color),

Under the **SHARPNESS** section, you have:

- **LEVEL:** define the selected input sharpness level,

Under the **USER GAIN** section, you find:

- **THE RED/GREEN/BLUE:** increase/decrease the Red/Green/Blue level of your input.

Next you have the **ASPECT** tab. All settings about the blanking and aspect ratio are available there:

For the analog inputs, the blanking section is available.

Under the **BLANKING ADJUSTMENTS:**

- **H&V POSITION SIZE:** you can manually adjust the input blanking with the V&H size or position.

Under the **ASPECT RATIO** section:

- **ASPECT IN:** forces a particular aspect ratio for the source. (5:4, 4:3, etc). This setting has no effect when set to native,
- **PREDEFINED CROP:** choose a specific cropped ratio if you use a source with black bands on top/bottom or left/right,
- **ASPECT OUT:** define the way the image will be displayed into a layer (full screen, centered, cropped or 1:1),
- **OVERSCAN:** choose to apply or not a predefined zoom on the image (use with video signal).

Under the **CROP** section:

- **TOP/BOTTOM/LEFT/RIGHT:** use the Top, Bottom, Left and Right values to crop your input.

The next tab is the **USER FORMAT:**

In this tab, you can explicitly define the input format. The input format is automatically detected by the **Pulse²** but you can change it or force it. The available formats are close to the current one, in terms of lines. This is only available for analog computer formats.

Keying Feature

With the keying feature, you will be able to key easily a color space or a specific luma on an input.

The device offers an individual keying for each input. Into the input settings, find the keying menu:

You have 2 ways of using the keying:

- **COLORKILLER:** classic color keyer removing a specific color space defined by user,
- **LUMAKILLER:** luma keyer removing a specific luminance level range.

Keying setup can be done either by setting directly color references and tolerances or by using the color grab assistant.

- **INVERT BUTTON:** at any time you can choose to invert the actual keying using this button.

DSK TITLING: after your keying, the DSK titling feature allows you to play with the transparency of your deleted pixels. Enabling this, simply adjust the opacity settings to make your keyed pixels less or more dark. This is useful when keying white or light colored text over a bright background.

How to use the **LUMA KEY:**

Select the lumakiller and then adjust manually, the luma level:

- **Manually:** set the minimum luminance value.

Luma Low Level: Everything darker than this value will be keyed away.

Luma High Level: Everything brighter than this value will be keyed away.

Then adjust the maximum luminance value to define the range of luminance levels which will be deleted.

Once you have completed the setup of your keyed input, place it in layer B on top of your background (such as a camera in layer A) in order to complete the keyed title or lower third effect.

How to use the **CHROMA KEY:**

- **Manually:** set the Hue and luminance to choose the color space you want to delete into your image. Set it manually looking at the color change into Current color. If you want, you can quickly select a color from a color panel, clicking on **CURRENT COLOR**. Then click on the color itself to obtain the color panel. Once your main color is chosen, you can define a degree of tolerance around this color. The tolerance will define, around the main color, an area that will be keyed too. You may still need to make further adjustments to the luminance level to complete your key effect.

- **Grabber:** activate the grabber to grab the color you want to key. Move the cursor and click on the grab button to grab the color.

7.2.8 Logo/frame management

To save a logo/frame click on this button:

The next page opens.

From here you can capture from the main or from the Preview.

You can still freeze the output before saving your logo/frame.

You can also utilize the logo keying feature to key away part of the image before saving the logo.

Select the area you want to save using the adjustable white square.
Once it is ok, simply click on execute to save the logo.

How to save a frame:

Choose first Program or Preview, click on **FREEZE** if you want to freeze your output. Then click on **EXECUTE** to save your frame into the selected slot.

7.2.9 Video out (Only for the Pulse² - PLS350-3G and Pulse²-H - PLS350-H)

The configuration of this section is only available if the **VIDEO OUT SETTING** mode has been set to **“RECORDING”** in the Preconfig>MISC section (see section 7.2.5)

Into this section, choose the output format of the video output.

You will find the status of your output and the possibility to choose the test pattern. In addition, you can adjust:

- **FLICKER**: choose the value of the flicker filter to disable the flicker effect on your screen (interlaced lines effect),
 - **GAMMA**: increase or decrease the gamma of your output
- Then you will be able to configure the Layout
- **LAYOUT**: configure the layout by selecting either the OUT #1 or the OUT #2 or a mix of OUT #1 and OUT #2.
 - **BACKGROUND COLOR**: select the color of the background,
 - **OVERSCAN**: enable/disable the overscan/underscan,
 - **SHARPNESS**: adjust the sharpness of the image.

You can still play with the H/V position and H/V size in order to adjust accurately the video out image on your final screen.

7.2.10 Audio management

The audio section permits the management of level, balance, and other audio settings for each input.

Before modifying the audio settings, be sure to check the audio input mapping. Each video input has one audio source mapped to it. The audio mapping configuration is found under **Menu > Inputs > each input**.

Into the **AUDIO SETTINGS**:

To display only the Current audio input which is played, click on **Current** button. 

If you want to select which audio input will be displayed, click on the list button  then select the input audio source you want.

To setup your analog audio input, simply click on **“ON PRELIST”**, if you have a Preview output, the audio input will be played on it. Then adjust the **GAIN** from **-11 to +6dB**.

A red indicator light will be displayed if you reach the input clip. If the input clip light is being illuminated, it means that the input gain is too high and the signal is being distorted. To solve this issue, decrease the gain value. The **0dB** corresponds to a **+4dBu** signal in input.

The gain manual adjustment is only available for analog input.

For every input, you have the possibility to set up your source as a Mono audio or stereo audio source.

You have the possibility to adjust the level vs right level using the Pan knob.

All input still have their own level which is **0 by default**, decrease or increase the value to modify the sound level:

Specific feature:

- **DIGITAL SOURCE:** all digital sources will have their sample rate displayed,
- **SDI SOURCE:** on SDI source you can choose 2 channels on one of the 4 groups.

The available audio output controls depend on the device setup configuration. If you are in a program/preview mode, you will have program/preview audio outputs. If you are in matrix mode, you will have 2 programs audio outputs.

For the audio output, you will find:

- **A LEFT/RIGHT PAN ADJUSTMENT**
- **A GAIN ADJUSTMENT:** this setting will help you to calibrate the analog audio output component. Depending on the device you will use after the analog way device, adjust carefully the analog gain. Basically, for a 0 level, the default value is 4 dBu.
- **A MASTER LEVEL:** it indicates the level of your input. On its right, a bar will move up and down to indicate the audio level in real time. A red button will turn on if the maximum level is reached.
- **A DELAY ADJUSTMENT:** the delay can be automatically calculated or manually adjusted. To adjust it manually, first disable the *Auto* button.

7.2.11 Service management

Into the service section, you will find tools.

Under **IMPORT / EXPORT**, you have the possibility to export or locally import the Local Presets, the Thumbnails and the Shortcuts.

The **TEMPERATURE** and **HARDWARE INFO** sections provide via alarm tabs the status of the PFGA and boards

Category	Name	ID	Modularity	Rev	hwRev	Status	Link
Temperature	MOTHERBOARD	00	0	1	0	OK	CONFIDENCE=0
	CF CAMELYA	00	0	1	0	OK	
Hardware info	CF FELINDRA	00	0	1	0	OK	
	CF TATIANA	00	0	1	0	OK	
Technical support	CF ADDO	00	0	2	0	OK	
	CF FW	00	0	2	0	OK	
	CF REDUCUT	00	0	2	0	OK	
	CF SO F1	00	0	2	0	OK	
	IMPORT	00	0	2	0	OK	

TECHNICAL SUPPORT: Display the different technical support contacts depending on your area.

7.2.12 Control management

In this menu, all specific settings, which cannot be sorted under the other menus, are listed:

Network

The interface loaded into the unit uses the IP configuration.

Under **INTERFACE**, you can define a new:

- IP address
- Netmask
- Port: choose the port

EDID

Under this section, you can manage the **EDID** library, and configure the **EDID** inputs if needed by dragging and dropping from the **EDID** Library section to the inputs

Functions

Under function, you can edit:

- **TIME:** the internal real time clock,
- **AUTO LOCK:** when this feature is enabled, you will be locked out from selecting empty inputs that have no source connected,
- **LCD BRIGHTNESS:** adjust the brightness of your LCD,
- **KEY BRIGHTNESS:** adjust the brightness of your keyboard.

Erase memories

Into this section, you can erase individual settings.

- Erase input settings memory: all input settings will return to their default value. This includes image, aspect, user format and keying parameters.
- Erase thumbnail: all the thumbnails you store on your computer will be erased.

Factory reset

Click on start to erase all settings (except network and RCS² parameters). The unit will reboot itself after the factory reset.

7.3 Edit

7.3.1 Layer management

When you enter into the Edit menu, you will encounter by default this window. On this example, we have the Screen 1 Program and the Screen 1 Preview. The following example can be applied for any other output configurations.

To display an input into one of the available layers A or B, simply drag and drop the input from the left column to the layer on the chosen screen. You can assign or change the inputs directly on Program as well as Preview.

To display a logo, open the logo list column (next to the source list) and then drag and drop the desired logo onto the logo layer. The same procedure is used to display a Background Frame.

You can assign a source to a layer by dropping the selected source into the layer letter icon, located on the left side of the layout window. This is particularly useful when the desired layer is hidden or blocked by other layers.

When a layer contains an input and is not empty, the RCS² displays the input number or a customizable thumbnail icon that represents your input. Please note: this thumbnail is not a live image.

In this example, 2 inputs are affected to 2 layers into the Screen 1 Preview. The **TAKE** button on the bottom right side allows sending your configuration, made on the Preview screen, to the Program screen. With each press of the **TAKE** button, the Preview screen is transitioned to the Program screen. By default, **PRESET TOGGLE** mode is disabled. That means, after a **TAKE**, the Preview stays as it was before. The Program and Preview will have the same content.

if desired, you can activate the **PRESET TOGGLE** mode from the **SETUP > PRECONFIG > MISC** menu, which will automatically swaps preview and program with each **TAKE**. After each **TAKE**, the Preview is reloaded with the previous Program.

Layers management

In this Edit mode, you have access to a lot of preset tools that can help you to create the preset you imagined.

7.3.2 Layer adjustments

The layer properties are found by opening the tab on the right side of the screen. Click on the double arrow button on the right to show or hide the layer adjustment tab.

Selected layer

The selected layer status information will indicate which screen, layer and source assigned to that layer are selected. You must select a layer in order to see the layer properties menu for that layer.

Reset feature

You can reset each category of layer settings quickly (Pos/Size, Transparency, Cropping, Border, Transitions, Effects, Timing) or you can choose to reset every settings in one click using the **ALL** button. You can freeze the input assigned to the selected layer using the Freeze button.

The settings reset here only affects the selected layer on the selected preset. For example, you can reset the layer settings for layer A on Preview, and Program will be unaffected until you press **TAKE**.

Position/Size

Adjust the size horizontally (X) or vertically (Y), then adjust the width and the height of your layer. You can use the cursor or directly enter a value. To keep the aspect ratio by using the cursor, please enable the **KEEP ASPECT RATIO** button. You will find it on the right of the width and height cursors.

Transparency

Use the Transparency to give at your layer a transparent effect. Layers behind the transparency layer will show through more or less based on the transparency value.

Cropping (only for live layers)

The Cropping feature allows you to cut the part of the image you don't want. Simply adjust the size horizontally or vertically and then adjust the position to display only the desired content. This crop is a layer property, all inputs displayed in this layer will be cropped. Do not confuse this setting with the input crop which is specific to an input.

Borders (only for live layers)

Choose a border for this layer from the available patterns including **EDGE** and **SHADOW**. For each pattern you will have specific values to adjust like colors, transparency, width/height or position V and position H.

Transitions

On the Transitions section, you can filter which transitions you want to see. For Example, you can show just the Slide, Wipe transitions.

Each layer has an opening and a closing transition. The opening effect will be applied when the layer switch from a source to another source or when the layer is switching from empty and appears with a source.

To set up the duration of the transition, please see below the timing and duration settings. If you want to force the layer to perform a closing and opening transition, see **FORCE TRANSITION**.

7.3.3 Effects

Force transition

The Force Transition button disables the cross-transition between two sources into the same layers. Enabling the Force Transition, it forces the layer to go out and then go in with the desired effect instead of mixing directly the two sources.

Smooth Move

Enable the Smooth Move to perform a smooth transition on the layer. Disable the smooth move if you require a constant speed move.

7.3.4 Background frame

The Background frame layer acts like any other layer. Simply select it and drag and drop a saved frame.

The frame 1 is now assigned to the Background frame into the Preview preset.

Layer layout

The layer layout gives you access to several predefined layouts with 2 or 1 PIP already sized and placed into the output. It can help you to quickly set up 2 PIPs side by side for example.

Once clicking on the layout button, you have access to the presets with 2, 1 PIPs or all layouts.

Two other options are available below:

- **Clear other layers:** layers already displayed and not included into the chosen layout will be cleared
- **Fade out other layers:** layers already displayed and not included into the chosen layout will be faded out during the transition. They are still present on the preset but with a 100% transparency.

After selecting the layout, the changes are applied on the selected screen. The size and position of all layers are updated. After applying a layout template, you can make further modifications to the layers before Taking your selections to Program.

Layer position

A layer position shortcut is also available. After having selected a layer, simply click on the **Pos.** button to have quick access to a layer position. Choose the new position. The change is applied straight away on your preset.

Layer size

You can choose between several aspect ratio. Once selected, the new aspect ratio is applied on the selected layer.

Other layer adjustments:

- **CLEAR BUTTON:** this button allows you to clear the selected layer from your preset,

- **CLEAR ALL BUTTON:** remove all layers from your preset,

- **CONTENT SIZE:** set layer size to its content size,

- **SCREEN SIZE:** set layer size to screen size,

- **LAYER SIZE/SOURCE RATIO:** set the layer size to fit the source ratio,

- **ALIGN BUTTON:** you need first to select at less 2 layers, then you can align them horizontally or vertically (use Shift to select 2 layers),

- **KEEP ASPECT RATIO BUTTON:** enabling this feature will keep the layer aspect ratio during resizing,

- **WIREFRAME MODE:** allows to enable/disable the layer thumbnails on your RCS²,
- **SHOW LAYER OUT OF SCREEN:** enable/disable the possibility to display a layer out of the screen into the RCS²,
- **TRAP LAYERS ON SCREEN:** disable the ability to position the layer off of the screen,
- **HIDE UNUSED LAYERS:** empty layers will not be displayed in the RCS²,
- **RELOAD PROGRAM:** load the preset of the Program screen into the Preview screen,
- **STEP BACK:** return to the configuration you had before the last TAKE,
- **MIRRORBUTTON:**  the mirror button allows you to define for each layer, frame and logo, the way it will be copied in the preset. You can choose to mirror the layer or flip the position. To access this feature, you first need to be in the Matrix mode. Take care that if you activate one mirror function, the screen 2 will automatically follow the screen 1 when switching from Program to Preview.

7.3.5 Preset load and save management

Save a preset

Once your preset is set up, you can store it into one of the 64 preset slots. To do that, click on **SAVE MM** and choose the number corresponding to the slot number.

WARNING: in the RCS², you cannot save a preset for only 1 screen when you are in matrix mode, only **MASTER MEMORIES** can be saved into the EDIT section.

In addition, in the EDIT section, as you work on screen by screen, the load button loads only single memory. You will find the load **MASTER MEMORIES** in LIVE MODE.

The first 8 presets are stored into the unit, all the other presets are stored locally on your computer, and will only be available when using the RCS² software.

If you want to have more details, you can **SHIFT+CLICK** on any preset to bring up a detailed status window. In this window, you can rename each preset using the **PRESET LABEL**.

- The first icon displays a window with all preset detail,
- The second one allows you to let the windows open,
- The last one quits the window.

Load a preset

To recall a previously saved preset, click the Load button (on the right side of each screen) and select a preset to load.

Reset button

You can reset a screen using the reset button. Using that, all sizes and positions will be deleted. Your layers will be reset. If the «**HIDE UNUSED LAYERS**» button is enabled and all of your layers are empty and hidden, you can still access the layers using the layer icons on the left side of each screen.

7.4 Live

The Live mode is designed for easy live operation of the device after you have created some presets.

On the right, you will find all your saved presets under the tab called “**MASTER MEMORIES**”. A simple drag and drop on the screen will load your preset into the screen (Program or Preview).

If you want to change an input into your preset into the live mode, simply use the left source ribbon and drag and drop your input into a layer.

You can still use the load master memory to load a master memory from the memory of the device or the RCS² using the preset tables.

Please click on **SAVE MASTER MEMORIES** and then choose a number to save the current preset of the unit into a master memory.

You can load at any moment a frame or a logo in the same way into a frame or logo layer.

To activate the **QUICK FRAME**, simply press the Quick Frame button (located on the right side of each screen).

Remember that a preset saved into a screen with a 1024x768 resolution, will keep its size into a screen of higher resolution. Therefore, it is best to save preset memories only after you have configured the output resolution.

You still have access to the **LOAD/SAVE/RESET** preset feature.

Once your preset is ready to send, use the **T-bar**, or the **TAKE** button.

You still have access to **STEP BACK** button.

When you use several screens, you have the possibility to load a preset on one or several screens. To **TAKE** only one screen separately, select which screens should be affected by the **TAKE** using this button:

SEQUENCE:

The sequence feature consists on a timeline composed by 16 scenes. Each scene can be filled by a preset memory. Simply click on MM to choose the memory slot you want to put into the scene.

To select the memory, simply choose it into the list or drag and drop it into the scene box from the memories selection (on the right).

This toolbar acts like a command for your timeline.

Simply click on play to launch the timeline.

You can stop the timeline at any moment using the pause or stop button.

Use the loop button to load again your timeline when it's finished.

Take a look at the global time of your timeline thanks to the clock on the right of the toolbar.

Note: To control the **Pulse²**, Analog Way also provides Crestron and AMX modules. For more details, see appendices.

8. OPERATING THROUGH THE FRONT PANEL

8.1 Front panel

8.1.1 Menu navigation

To access the **Pulse²** menu, press the **EXIT/MENU** button in the control section. To highlight items in the menu which will appear on the VFD screen, turn the scroll knob left or right to the desired menu item. When you have reached the desired menu item, press the **ENTER** button in the control section to access that menu function. Pressing the **ENTER** button when a selection has been made sets the value to that selection in the **Pulse²** memory. When all settings have been made, press the **EXIT/MENU** button to exit sub-menus and return to the main menu.

Simply selecting a menu item will not set it to that value. Be sure to press the **ENTER** button when parametering the menu items or to push the scroll knob.

8.1.2 Home menu

Pressing the **MENU** button in the menu section of the **Pulse²**, will display and give you access to the following items on the menu VFD screen:

- **MODE**: select to choose which mode the **Pulse²** will work in (Mixer/Matrix mode),
- **OUTPUT 1**: select to set the output types and resolutions of Output #1,
- **OUTPUT 2**: select to set the output types and resolutions of Output #2,
- **INPUTS**: select to configure the 8 individual input types and resolutions,
- **PRESET**: select to store and use presets,
- **IMAGE***: select to change source image settings of an input,
- **KEYING/TITLING***: select to access keying and titling controls and parameters when video layer is selected,
- **SCREEN**: setup your background color and your Quick Frame,
- **LAYER***: select to adjust layer size, position, border, transparency or transitions,
- **FRAME/LOGOS**: select to store (record), use and manage logos and frames into the **Pulse²**,
- **AUDIO**: select to access all audio input and output parameters,
- **CONTROL**: select to access device software information, LAN settings, reset factory settings, and other user oriented functions.

** These items are only displayed if a valid input is assigned to the current layer (Pulse²- Ref. PLS350-3G and Ref. PLS350-H only)*

8.1.3 Operating modes

The **Pulse²** offers 2 modes to work from: the Mixer mode and the Matrix mode which turns your **Pulse²** into a true 8 x 2 scaled matrix with numerous effects and PIPs and logos.

To choose which mode the **Pulse²** will operate in, press the **EXIT/MENU** button and select mode in the menu by rotating the scroll knob. Then press the **ENTER** button to enter the **MODE** sub-menu. Select the desired mode by rotating the scroll knob, and press the **ENTER** button to confirm your choice. Press the **EXIT/MENU** button to return to the main menu.

8.1.4 Resetting default values

It is strongly recommended resetting all of the default values of your **Pulse²** unit before setting up your shows and events. This will help eliminate confusion caused by unneeded settings from a previous operator. To do so, press the **EXIT/MENU** button and select Control in the menu by rotating the corresponding knob. Then press the **ENTER** button to enter the **Reset/Erase** sub-menu. Select Default Values by rotating the scroll knob, and press the **ENTER** button to enter your choice to restart your **Pulse²** with its factory settings. This operation should take approximately 30 seconds.

8.1.5 Pulse² color codes

Analog Way engineers have developed a handy, user friendly way of identifying machine status on the front panel, via the use of color codes on the buttons of the machine. All new Analog Way machines use the same codes, for quick recognition of the status of any device of the range, at any given time.

For the **Pulse²**, button color codes are as follow:

- Sources on the Program output are indicated in **red** when active,
- Sources on the Preview output are indicated in **green** when active,
- Buttons in the layer section turn **red** or **green**, depending on whether the selected layer is active in respectively the Program or Preview window,
- menu buttons are indicated in green,
- Selecting a button with an available source or function will cause that button to blink **green** on the preview, or **red** once it is on the Program output,
- **TAKE** button reacts as follows:
 - If take function is available, the button will appear in **green**.
 - When the take function is active, it will light up red.

Solid red:		#1 = Source is on the Program output #2 = Freeze enable
Solid green:		#1 = Source is on Preview #2 = Function available for modification #3 = Current output on Matrix mode
Blinking red:		Layer/source selected or is currently active on the Program output
Blinking green:		Layer/source selected or is not currently active on the Program output

8.2 Settings in Mixer mode

8.2.1 Source Input selection

Plug your sources using the 4 multi-plug inputs, 2 HDMI Inputs or 2 3G/HD/SD-SDI inputs. Be sure that all connectors are firmly attached using all available locking screws.

8.2.2 Input selection settings

To set up your inputs automatically: **Inputs menu > Autoset all**

You can also do it manually on each input# using the **ENTER** and the Knob button and set up the inputs type one by one.

You can also check your actual input configuration using the config status: **Input menu > Config Status**

You can find several settings for each input (some settings are specific to some signal type):

- **INPUT STATUS:** display the input status,
- **AUTOSET INPUT:** launch an automatic setup on the inputs,
- **FREEZE:** freeze the input,
- **ACTIVE PLUG:** choose the active plug of the input,
- **TYPE:** to set up your input type (Computer, Video etc..),
- **AUTOSET:** launch an autosest on this plug,
- **ENABLE:** enable/disable the input#,
- **SYNCHRONIZED:** enable this option when you source is from the same refresh rate than the reference rate,
- **HDCP ENABLE:** enable/disable the HDCP automatic detection,
- **HSYNC LOAD:** to change the load of the sync signal,
- **3D COMBO FILTER:** choose manually the combo filter for interlaced source,
- **FORMAT:** for analog source, choose to force a analog format,
- **AUDIO INPUT:** select the input audio source according to the input video source,
- **EDID:** set up your EDID for the selected plug,
- **STATUS:** to summarize the input status.

Concerning the HDMI inputs, a specific feature allows enable/disable the HDCP receiver for the input chosen. It can be very useful especially using a Mac: **Input menu > HDMI # > HDCP detection**

NOTE: The input status is available at any time in the status input menu and can give you information about format rate and HDCP status.

8.2.3 Source Output selection

Once your inputs all have been configured, the output settings of the **Pulse²** must be set according to the machines plugged on your **Pulse²** Program and Preview outputs (video projector, Preview monitor...).

NOTE: If you want to use HDCP content from your sources, be sure to attach HDCP compliant screens or projectors. If HDCP sources are used with non-HDCP compliant screens, the output image could be disabled.

8.2.4 Output selection settings

To set up the output, go in the Output #1 (Program) or Output #2 (Preview) menu and choose first the adapted format/resolution, and then the appropriate rate for your screens by using the knob button and the **ENTER** button.

Output #1 > Output Format > Output rate

Please note that a pair format/rate is only applied when the rate is validated.

Use the native resolution of your screens/projectors in order to obtain the best image quality. In the Preview Output menu, you can also match the output configuration the Program Output to the Preview Output by checking the case Sync w/Out 1. It allows you to set up your outputs via the output 1 menu.

Output #2 > Synch w/Out 1

Some other settings are available too:

- **OUTPUT STATUS:** display the status of the selected output,
- **OUTPUT FORMAT:** choose the output format,
- **OUTPUT RATE:** choose the output rate,
- **GAMMA:** use this feature to set up the output gamma,
- **ANALOG TYPE:** set up the type of synchronization of your analog output,
- **HDMI TYPE:** set up the type of color space of your digital output,

- **DVI as HDMI:** DVI output content as HDMI. Audio is included,
- **HDCP DETECT:** enable or not the HDCP detection on the output,
- **CENTERING PIC:** display the centering test pattern,
- **TEST PATTERN:** choose to display one of the available test pattern.

All changes have to be validated by pressing the **ENTER** button in order to be saved

NOTE: The output status can provide you all information about the output in real time. This feature is particularly needed when HDCP is used with long cable to be sure that the communication is well handled.

8.2.5 Preview features

The Preview output can display all adjustments before the TAKE.

All current layers for the Program are defined by a colorful frame on Preview. They are identified by a letter and a number with the same color.

- **Frame:** Frx, with x of 1 to 8,
- **Layer A:** Ax, with xx of 1 to 8,
- **Layer B:** Bx, with xx of 1 to 8,
- **Logo 1:** L1x, with x of 1 to 8,
- **Logo 2:** L2x, with x of 1 to 8,
- **Quick Frame.**

Because the number of resources available is limited, the Preview displays only one live or still layer at a time. The others are only identified by their colorful frame and their number.

8.2.6 Preview Id

The function disables all the display of ID information in Preview mode. The colored frames and numbers indicating your source selection on each layer are disabled. To set up your Preview Id:

menu > Control > Functions > Preview Id

8.2.7 Working with layers

- To assign a source to a layer, press the *Layer button*, press the *Source#* you want to assign.
Ex: Layer A > Source #4
The source number 4 will be displayed in the **Layer A**.
Press TAKE to view the result on the Program screen
- To delete a layer from the Preview screen:
Press Layers # > Press Black button
Press TAKE to view the result on the Program screen
- To clear all layers on your Preview screen:
Hold the Black button at least 3 seconds
Press TAKE to view the result on the Program screen
- To freeze a layer: **Select a Layer > Press Freeze button**

8.2.8 Working with layers functions

Once a source is assigned to a layer, you will have access to some layer settings in the *Layer menu* or directly by pressing the layer button.

The settings available depend on the layer selected:

- **Layer adjusts:** set up layer size and position,
- **Layer zoom:** set up layer zoom size and position,

- **Size Templates:** adjust a specific size (Fullscreen, 1/2, 1/3, ...),
- **Transparency:** adjust the layer transparency,
- **Border:** choose the border and adjust its properties,
- **FORCE TRANSITION:** enable/disable the selected transitions,
- **Opening and Closing effect:** adjust the Open/Close effect type and duration,
- **Smooth move:** enable/disable smooth move,
- **Status:** get the selected layer status.

All changes have to be validated by pressing the **ENTER** button in order to be saved
Press TAKE to view the result on the Program screen.

Settings available:

Settings	Background live / PIP#1	PIP#2
Position	YES	YES
Size	YES	YES
Zoom	YES	YES
Transparency	YES	YES
Border	YES	YES
Opening effects	YES	YES
Closing effects	YES	YES
Smooth Move	YES	YES

Even the logo and frame buttons can access to their own settings, but a logo/frame# has to be affected too.

2 layers

The Program output can displayed simultaneously up to 6 layers stacked from bottom to top as follows:

- **Frame:** one stored frame selected from 8 available,
- **Layer A:** one source selected from 8 inputs available,
- **Layer B:** one source selected from 8 inputs available,
- **Logo 1:** one stored logo selected from 8 available,

- **Logo 2:** one stored logo selected from 8 available,
- **Quick Frame:** one of the 8 frames available.

8.2.9 Opening transitions and closing live layers

When transitioning live layers, depending on how many scalers are in use, the **Pulse²** TAKE function will act in one of 3 different ways when transitioning the next preset (Preview) to the current preset (Program):

- **TAKE 1 - shot: Case #1**

- There are enough scalers for making a transition
- All inputs are locked on to scalers
- There are no constraints for closing before the TAKE
- All opening and closing transitions can be performed simultaneously.

- **TAKE 2 - shot: Case #2**

- There are enough scalers for making a transition
- All inputs are locked on to scalers before the TAKE
- There are no constraints for closing during the TAKE
- All the necessary closing transitions are performed to free occupied scalers and then the **Pulse²** performs all openings (for example, when a frame or a logo needs to be changed, except with Cut effect).

- **TAKE sequenced - shot: Case #3**

- There are not enough scalers for making a transition
- All inputs are not locked on to scalers
- All the necessary closing transitions are performed to free occupied scalers. The **Pulse²** locks on to new sources and performs all openings.

8.2.10 Layer adjustment menu

- To have access to the layer adjustment menu, a source has to be affected to your layer:
Press Layer# button > Press source #
- To adjust layers:
Press Layer# button > Then go into Layer adjut menu
Press TAKE to view the result on the Program screen

8.2.11 Layers with transitions & borders

Transitions

All the settings are available in the *Layer menu* after pressing the selected layer.

The transition effects have some shortcuts on the front panel too.

To use it: **Press the selected Layer # > Press Effect button, then choose the opening/closing effect**

The effect will be immediately attached to the selected layer (Preview).

- **CUT:** duration time can be set to delay the cut effect,

- **FADE:**

- Adjustable pre-timed fades or manual transition with T-Bar,
- Fade between any input, computer or video,
- Adjustable cross-fading duration,

- WIPE:

- Numerous wipes can be selected horizontal and vertical, from the center or outside, in circle, Zoom in and out,
- Horizontal: from left, center -or- vertical: from up, down, center,

**- SLIDE:**

- Sliding of video or computer images during the transition,
- Horizontal: from/to left, right -or- vertical: from/to up, down.

The **Pulse²** offers 21 seamless transition effects.

- BORDER:

The border has to be setting up in the *Layer Menu*:

Press Layer# button > go in border menu > select and set your border with color and size

Press TAKE to view the result on the Program screen.

NO BORDER

EDGE BORDER

SHADOW BORDER (4 possible orientations)

- A transparency can be applied to the shadow border
- Size and style of layer border are adjustable

8.2.12 Capturing frames

It is possible to store up to 8 frames in the **Pulse²** non volatile memory. To capture a frame, display the exact content you want to save on one of your outputs, at the exact resolution, you can use the freeze button if you want. Then follow this step:

Logos/Frames menu > record Frame menu > Frame #

Choose the frame number slot and wait until the unit finishes to save. Your frame is now saved and you can use it through the frame button.

The capture of frames can be done only under the following conditions:

- The capture can be done from the Program output or the Preview output,
- The disappearance of frames or logos on the Preview and Program output is normal during saving.

A frame captures the state of the specified output at the output resolution, and must be recalled using the same output resolution. Resizing or other image manipulation of the captured frame is not possible.

Attempting to use a frame at a different resolution will result in a partial frame display or a frame which does not fill the screen.

During the capture, the output is outlined by a white border and includes the pixels into the white rectangle.

8.2.13 Working with frames

Frames are mainly used as backgrounds in a typical show or event setup, and can be recorded from any of the **Pulse²** 8 sources and called back at the press of a single button. To use a frame, be sure first that it is well saved, then:

Press Frame button > Press Frame # button

NOTE: Frames may be used only one at a time and can be placed only in the frame layer.

8.2.14 Opening transitions & closing still layers (logos or frames)

When transitioning still layers, depending on how many scalers are in use, the **Pulse² TAKE** function will act in one of 2 different ways when transitioning the next preset (Preview) to the current preset (Program):

- TAKE shot: 1

- All still frames make an opening and closing phase.
- All sources of the same layer are completely different between the current preset and the next preset. The opening and closing effects of the layer are set to Cut.

- TAKE shot: 2

- One of the layer makes a change of source which is not in Cut.
- The opening and closing phases can be done with different effects.
- The still frame appears and disappears of the layer with the following effects: Cut, Fade, Slide or Wipe.

8.2.15 Frame input setup menu

In the frame input setup menu, you have the possibility to save a frame, and the possibility to erase a stored frame:

Logos/Frames menu > save Frame > Frame #

Logos/Frames menu > Erase > Frame #

8.2.16 Frames as layer

The frame is considered as a layer and has some settings available: Pos./Size, Transparency, Opening/Closing effect, Smooth move and Status.

Those settings have to be used as layer settings. Press frame button to have access to the layer menu settings.

You can change frame or delete frame on the Preview screen using the same way the layers do:

- Delete: Press frame button > Press Black

- Change: Press frame button > Press another Frame #

Press TAKE to view the result on the Program screen.

8.2.17 Capturing logos

To capture a logo, display the exact content you want to save on the Program or Preview screen, you can use the freeze button if you want. Then follow these steps:

Logos/Frames menu > Record Logo menu > Pos/Size adjust > Store menu > logo#

To set up your logo you have several features available:

- Position / Size Adjustment
- Keying type
- Luma / Chroma key
- Cut out color.

Select the logo number you want to save and wait until the unit finishes saving. Your logo is now saved and you can use it through the logo button.

You can save up to 8 logos with the **Pulse²**.

The capture of logos can be done only with the following conditions:

- The capture can be done on the Program output or the Preview output
- The disappearance of logos on the Preview and Program output is normal during saving.

The logos are captured with the same size as is visible on the Program output without any form of adjustments. If zooming is required, resize the layer or use the layer zoom or input zoom.

A logo captures the state of the defined area on the specified output at the Program output resolution, and must be recalled using the same output resolution. Resizing or other image manipulation of the captured logo is not possible.

The capture zone is outlined by a white rectangle and includes the pixels beneath the white border. The non-captured area has a reduced brightness.

Logo capture is limited in the number of pixels being captured. When the logo capture area is resized, extending the horizontal size may reduce the vertical size to compensate.

Logos can also be captured and displayed with transparent areas. By adjusting the keyer in the logo capture menu, the portions of the captured area can be keyed away and captured as transparent.

The logo “Cut out color” can help display which portions of the image will be captured as transparent.

NOTES:

- The cut out color is only a visual tool to help identify the transparent areas of the logo. These colored regions will not be captured but later displayed as transparent area.
- Capturing a “logo” is limited to a small percentage of the output resolution. To capture and display a full screen image, use the still “frame”.

8.2.18 Capturing an animated logo

To capture animated logo, display the exact content you want to save on the Program screen, you can use the freeze button. Then follow this step:

Logos/Frames menu > Record Anim menu > Pos/Size adjust > Store menu > logo#8

To set up your animation, you have several features available:

- Position / Size Adjustment
- Keying type
- Luma / Chroma key
- Recording time
- Cut out color

Select the animated logo #8 and wait until the unit finishes saving. Your animation is now saved and you can use it through the background logo button.

Only one animated logo can be saved in the Pulse².

8.2.19 Logos input setup menu

In the logos/frames menu, the logos can be deleted in the Erase menu:

Logos/Frames menu > Erase menu > Select Logo#

8.2.20 Working with logos

A simple or animated logo can be manipulated through the front panel. On the front panel, the logo# are associated to the input# respectively. To assign a logo# to the logo layer:

Press Logo1 Layer button > Press Input#

Logos #1 to #8 are available directly by the input # button on the front panel.

You can change logos or delete logos on the Preview screen using the same way the layers do:

- **Clear: Press Logo (#1 or #2) button > Press Black**

- **Change: Press Logo (#1 or #2) button > Press another Input#**

8.2.21 Logos as layer

Logos are under the layer rules, you will have direct access to settings by pressing the logo layer button. You have 2 logos layers buttons available.

You can use the Pos/Size/Zoom adjustment menu and the Effect button from the front panel too.

8.2.22 Creating presets

The **Pulse²** allows the creation of user defined presets very easily. Any setup you have configured on screen, can be stored into one of the 8 available user presets.

1. After having configured layers, transitions, logos... on your screen, go to the *Preset* menu by pressing the **EXIT/MENU** button, and select *Preset* by rotating the scroll knob. Then, press the **ENTER** button to enter the *Preset* sub-menu. Choose *Preset Copy* by scrolling with the corresponding knob, and press the **ENTER** button to access the sub-menu.
2. In the sub-menu, choose *Save From Program* or *Save From Preview* to determine which screen you want to memorize the preset from, then set the preset memory (#1 to #8) you wish to use as your "User Preset" (by default, the **Pulse²** will choose the next available preset in the **Pulse²** memory).

By pressing the **ENTER** button, the **Pulse²** will ask you to confirm. Select *Yes*, your screen is memorized as a preset.

8.2.23 Working with presets

The 8 user presets of the **Pulse²** can be recalled at any stage during your show or event.

1. Press the **PRESET** button, then press one of the eight first preset buttons to choose which memory (#1 to #8) you wish to use. The preset will be displayed on your Preview screen.
2. Once you have selected your preset, simply press the **TAKE** button to view the result on your main screen.

8.2.24 Working with audio

Into the audio menu, you will find some audio adjustments:

- **Audio mode:**

- **NO AUDIO:** the audio of your device is switched off
- **PRESET MODE:** the standard mode of use of the device

You have two possibilities:

- **Top layer:** the sound on the output will follow the audio input of the top layer.
- **Breakaway:** when breakaway is activated, the audio on the output is memorized into the preset. A change of preset, changes the audio on the output. A change of content into a video layer has no effect on the audio.
- **ROUTING MODE:** in this configuration, simply choose an audio input to assign it to the output. The audio configuration remains the same during the show.

- **Source settings:** into this menu you will have access to all source settings:

- **ANALOG SETTINGS:**

- **Mute:** select to mute the input
- **Stereo:** select to choose between mono or stereo input
- **Analog gain:** set up the analog gain of your analog input (0 for 4dBu)
- **Level/balance:** select to adjust the input audio level and right and left balance.

- **DIGITAL AUDIO:**

- **SPDIF/AES3:** choose the digital audio output mode

- **Main audio/prelist audio:** define the main or prelist audio settings:

- **PRESET MODE:**

- **Top layer:** the sound on the output will follow the audio input of the top layer.
- **Breakaway:** when breakaway is activated, the audio on the output is memorized into the preset. A change of preset, changes the audio on the output. A change of content into a video layer has no effect on the audio.
- **Master mute:** select to mute your master audio
- **Stereo:** select to choose between mono or stereo output
- **Analog level:** set up the analog gain of your analog output (4dBu by default)
- **Master volume:** set your master volume of the output
- **Balance:** set the right/left balance of your output.

8.2.25 Special features

- **DYNAMIC FIT** (automatically activates the transparent background)

- Automatic adjustment of the layer (Ratio) to fit the source image borders during a transition.
- Dynamic & Automatic adjustment of the layer to fit the source image borders (Black Stripe).

- **SMOOTH MOVE EFFECT**

- Smooth Move layer control the acceleration of the layer. The time can be different between the opening and closing layer,

- **WORKING WITH DSK** (Chroma / Luma key)

- **Pulse²** allows to use a live source with green or blue (or any color) background and to key it over another

live input,

- Background is removed and replaced by another source,
- Title can be keyed (DSK) on Analog or Digital Sources.

To use keying, first select a source in the desired layer:

Layer button > source number button

Layer

Frame

Image live

Then in the main menu, select the Keying/Titling menu.

You now have several choices to key your sources. The Luma Key and the Chroma Key based on the Luma pixel values and the Chroma pixel values and for both an additional Titling menu which can be

useful to choose the transparency value of your keying.

Keying/Titling menu > Type menu > Select your keying type

Once your keying mode is selected, the **Pulse²** provides you some keying advance setting:

For Luma Key:

- Luma Keying is used to key from a particular luminous intensity. It produces a hard edged key based on intensity, which is most suitable for titling effects. You can choose to key things that are extremely dark or extremely bright and keep everything in between, or invert to key only things that are of a medium intensity.
- The black and white levels define where to begin the keying. In the range 0 to 255, 0 represents no luminance, or black and 255 represents full luminance, or white.

- **Level Black:** As the Black Level is changed from 0 to 255, things that are black are first keyed out, followed by dark grey, then light grey, and so forth, until the entire picture is keyed out at 255.
- **Level White:** As the White Level is changed from 255 to 0, things that are white are first keyed out, followed by light grey, then dark grey, and so forth, until the entire picture is keyed out at 0.

For Chroma Key:

Chroma Keying is used to key from a particular color. It produces a key which is most suitable for moving images and “weatherman” style applications.

- Color grabber:

Select Chroma Key menu > Select Color grabber menu

Using a crosshair, you can select a particular hue based on what is on screen. Once you have adjusted the crosshairs to a desired position, press set/enter to capture the color value at that instant. You can then adjust the other parameters such as Tolerance to further refine your key.

- Manual Setting:

Select Chroma Key menu > Manual Settings menu

- **R,G,B:** these controls allow you to manually select a hue, defined by its Red, Green, and Blue values as you can find in Windows (Paint software).
- **Tolerance:** the Tolerance parameter allows you to expand your key color selection to include colors which are similar to the selected value. A tolerance of 1 will select only the desired hue, whereas a tolerance of 255 will select nearly all hues.
- **Black Level:** this option permits adjustment of the luminance levels of the keyed hue. The Black Level is the luminance lower bound. Colors in the selected hue range with a luminance brighter than the Black Level but darker than the White Level will be considered part of the key.
- **White Level:** this option permits adjustment of the luminance levels of the keyed hue. The White Level is the luminance upper bound. Colors in the selected hue range with a luminance brighter than the Black Level but darker than the White Level will be considered part of the key.
- **Titling alpha:** if you have selected one of the two Titling mode, the titling menu appears. This option places a transparent black backdrop behind the entire layer to which the key is applied. This effect is useful for using bright titles on bright backgrounds, such as clouds.
- **Invert keying:** by default, this mode is disabled. When this mode is activated, the key selection will remain on screen, and all other portions of the image will be keyed away. For example, you would see the green screen behind the actor, while the actor would be keyed away.

8.3 Settings in native Matrix mode

8.3.1 Source Input selection

Same as Mixer mode

8.3.2 Input selection settings

Same as Mixer mode

8.3.3 Working with layers

Same as Mixer mode

Settings	Layer A
Position	YES
Size	YES
Zoom	YES
Transparency	YES
Border	YES
Opening effects	YES
Closing effects	YES
Smooth Move	YES

The layers are used in the same way as the Mixer mode. A source has to be selected to activate the layers settings. Each layer has its own settings, Layer A on Output #1 is not linked to Layer A on Output #2 in terms of settings.

All layers settings are available in the *Layer* menu once the layer is selected.

NOTE: Take a look at the blinking of the Matrix mode button to always know on which output you are working on.

8.3.4 Source Output selection

Same as Mixer mode.

NOTE: If you want to use HDCP content from your sources, be sure to plug HDCP compliant screens or projectors. If it's not the case, the output image could be disabled.

8.3.5 Output selection settings

To set up the outputs, go in the **Output #1** or **Output #2** menu and choose first the appropriate format/resolution and then the adapted rate for your screens by using the **knob** button and the **ENTER** button.

Output# > Output Format > Output rate

You can also in the **Output #2** menu, synchronise all the changes from the **Output #1** to the **Output #2** by checking the case **Synch w/Out 1**. It allows you to set up both outputs at the same time.

Output #2 > Synch w/Out 1

Try to use the native resolution of your screens/projectors in order to obtain the best image quality.

NOTE: The output status can provide you all information about the output in real time. This feature is particularly needed when HDCP is used thanks to the HDCP status.

All changes have to be validated by pressing the Ok button in order to be saved

Video out - For Pulse² - Ref. PLS350-3G and Ref. PLS350-H only

Display mode	Presentation	Availability
Output #1 Menu > Video Out > Connection > Screen 1		YES
Output #2 Menu > Video Out > Connection > Screen 2		Matrix mode only
Output #1 & #2 side by side Menu > Video Out > Connection > Screen H-Tiled	OUT #1 OUT #2	Matrix mode only
Output #1 & #2 Top and Bottom Menu > Video Out > Connection > Screen V-Tiled	OUT #1 OUT #2	Matrix mode only

In native Matrix mode, the menu “Config.ode” allows you to choose recording Output #1 or Output #2. In Matrix mode, the SDI output embeds audio from Output #1 and Output #2.

8.3.6 Working with native Matrix mode

To activate the native Matrix mode:

Mode Menu > Matrix mode Menu

You’ll find all menus from the Mixer mode in the main menu except some specific matrix function added. To work with native Matrix mode, you have to use the Matrix # buttons first.

Press Matrix #2 button > Press Layer A button > Press input #3

Press TAKE to view the result on both screens

Don’t forget to press the correct Matrix # button before pressing the *Layer selection* button, in order to be sure doing the manipulation on the correct output.

8.3.7 Working with Cut, Fade or Transitions

All the transitions (Cut, Fade or Transitions) are available in the native Matrix mode. Although the Matrix mode is activated, you will be able to perform powerful transition effects seamlessly. It can depend on your configuration.

The **Pulse²** has 4 scalers, to understand how your effect will be performed, you need to know how many scalers are used on your outputs. Don’t forget that you always need one free scaler to perform seamless transitions.

Example:

1 layer on each output > 2 scalers used > 2 seamless transitions

The frame and the logos are not considered as live layers and are not counted as using a scaler.

8.3.8 Working with presets in Matrix mode

In Matrix mode, you will find a new menu into *Preset menu* called “*Preset management*”. This will help you to define what kind of preset you want to save:

- **BOTH OUTPUT:** preset saved for both outputs,
- **CURRENT OUTPUT:** preset saved only for the current output,
- **OUTPUT 1:** preset saved only for output #1,
- **OUTPUT 2:** preset saved only for output #2.

8.3.9 Working with Mirror modes

Please see the Mirror mode features. (page 44)

8.4 Menu tree

The following menu tree provides the sections of the MIDRA's menus.

Please note that the availability of the sections depends of the reference and the configuration of your device.

9. MAINTENANCE AND SUPPORT

9.1 Dashboard (RCS²)

On the RCS², you have access to a chart with general information on the unit.

Please click on the Dashboard button: **DashBoard**

On this chart, you will find under the **INFO** tab, the Device name, the Serial number of your product, the actual firmware and the software version of the RCS².

Under **CONNECTIVITY**, you will find the current IP address of your unit and its MAC address.

10. APPLICATIONS NOTE AND TIPS

10.1 HDCP

HDCP is a content protection mechanism which uses encryption to prevent high value content from being delivered to non-authorized devices. For example, Blu-ray players use HDCP on their HDMI outputs to ensure that the HDMI output cannot be routed to a digital recording device.

The **Pulse²** is fully HDCP compliant, meaning that you will be able to use the **Pulse²** to accept HDCP protected sources and route them to any HDCP protected outputs. As Analog Way is a licensed HDCP adaptor, this also means that the **Pulse²** is prevented from displaying any HDCP protected images on any non-HDCP compliant outputs (as is the case for all licensed HDCP compliant devices).

HDCP can only be used on certain connection formats, including DVI, HDMI, and DisplayPort. Keep in mind that simply because a connection is using a DVI, HDMI, or DisplayPort connection, it does not guarantee that the devices connected are maintaining an active HDCP connection. For example, you may find video recording or capture devices equipped with an HDMI input, however HDCP licensing forbids these devices from capturing HDCP protected content.

HDCP is not supported on connection formats such as composite, component, S.Video, SD-SDI, HD-SDI, 3G-SDI, or VGA. This means that any source which becomes protected by HDCP cannot be converted to these formats. For example, while you may find a Blu-ray player which can directly output a composite video signal, HDCP licensing forbids converting the HDCP protected HDMI signal back to composite or any other non-protected format.

To help troubleshoot HDCP in your installation, each input and output page is equipped with HDCP status information to indicate in realtime when HDCP encryption is being used.

Certain devices such as Macintosh computers can be misleading to use in conjunction with an HDCP compliant presentation switcher such as the **Pulse²**. This is because devices like the Mac computers can be used to output both HDCP protected content (such as a movie downloaded from iTunes) as well as non-HDCP protected content (such as a Keynote presentation or the desktop). When a computer first connects to an HDCP compliant device such as the **Pulse²**, it learns the capabilities of the device through the EDID connection. Upon seeing the HDCP compatibility of the attached **Pulse²**, devices like the Mac computers will immediately attempt to use HDCP encryption at all times, despite the content currently displayed on the computer screen. Since this source would now be considered an HDCP protected source, the **Pulse²** would be required to prevent it from being displayed on VGA or SDI outputs and only allow it to be displayed on outputs protected by HDCP. To work around this problem, the **Pulse²** allows the HDCP features of a particular input to be disabled, which in turn informs the Mac computer to avoid using HDCP, and allows content such as Keynote and the desktop to be displayed, as this input will no longer use HDCP protection. Please note that disabling the HDCP features of the input do not circumvent HDCP protections, and thus do not allow you to view any content which requires this protection.

For more information about HDCP, please refer to our whitepapers on HDCP, or visit the HDCP foundation website.

10.2 HDBaseT™

HDBaseT is a global standard of the transmission of high-definition video and audio, Ethernet, controls, USB and up to 100W of power over a single cable, for up to 100M/328ft.

The **Pulse²-H** (Ref. PLS350-H) is fully compliant with the HDBaseT Specifications.

Equipped with HDBaseT receivers and transmitters, the **Pulse²-H** is able to input video, embedded audio, Ethernet pass-through and manage a Power over Ethernet feed (30W) and to output video, embedded audio, Ethernet, plus a bidirectional Serial connection and a IR connection.

The bidirectional serial and the IR connection are output via the 5-pin MCO connectors associated to the HDBaseT port.

Based on the HDBaseT specifications of the HDBaseT Alliance, the **Pulse²-H** is compatible with the list of HDBaseT products referenced by the HDBaseT alliance. The full list of available products are listed at <https://hdbaset.org/advanced-search/>

In case of issue with your installation, the HDBaseT alliance has released a troubleshoot guide.

The document is available at <http://installers.hdbaset.org/wp-content/uploads/2014/06/Installers-10-commandments.pdf> and the content of the document is :

1. LAN is the Cable

HDBaseT runs on a regular cable (Cat5E or above), so any best practices regarding Ethernet installations also apply here. Cable performance is defined by the quality of the cable, the distance of the connection, the handling of the cable and the video resolution expected. A rule of thumb is that the higher resolution, the better the cable should be. The same goes for distance.

The cabling infrastructure in any project is likely to be around for a long time -it should last longer than any other component in the network, and choice of cable should take into consideration new applications, additional users and potential expansions of the whole systems.

2. Thou shalt not untwist your wires unnecessarily

There is a reason that the wires are twisted: it cancels out electromagnetic interference (EMI) from external sources and crosstalk from neighboring conductors. When terminating the cable, make sure not to untwist more than half-an-inch (and preferable a quarter-of-an-inch) from the point of termination, and remove as little of the sheath as possible.

3. Thou shalt handle your cable with care

LAN cable are fairly resilient. Yet, any rough handling, such as tight tie wraps, clamping or stapling can damage the cable, compromising performance or event preventing signal transmission. Tie cables loosely with appropriate cable wraps, and make sure to use appropriate cable support systems when too many cables are involved, such as trays, carriers or J-hooks. If pulling cables is necessary, make sure not to pull too hard because that also may cause pairs to untwist and degrade performance. Cable physical protection safeguards the integrity of data transmission.

4. Thou shalt not overbend your cables

Another important issue for cable integrity is the bend radius. Bend radius is the inside curve of the cable during and after installation. It is best to keep the minimum bend radius at least at four times the diameter of the cable – that means that the cable should not be bent below that radius, so as not to damage it and compromise signal transmission. Overbending may lossent or otherwise modify the wire twisting and increase susceptibility to external noise and near-end crosstalk within the cable.

5. Thou shalt keep your cables away from power sources

Cables should be kept at a distance of at least 12 inches from power cables. In an environment prone to high

EMI, it is best to use shielded cables. Most Cat5e cables are unshielded, which makes them more flexible, durable and inexpensive. But they are also more susceptible to EMI. If using unshielded cables, keep them away from any source of EMI such as other cables, transformers and light fixtures. In high RF environments, it is best to use shielded cables.

The same applies to shielded connectors. In a shielded connector, the signal pins are surrounded by a metal shield and further reduce electromagnetic interference. Shielded connectors provide a better fit and therefore better performance.

6. Thou shalt mind your distances carefully

HDBaseT delivers the 5Play feature set over 100m/328ft. One of the factors that affects distance is the quality of the cable used, the working environment, and the video resolution expected. Higher quality cable will keep the signal better than low quality cable over distances. A noise-free environment will deliver better performance over the distance than a noisy or EMI-prone environment. Some HDBaseT equipment allows for Long Reach connectivity -150m/492ft- for lower resolutions of 720p.

7. Thou shalt not use patch cords unnecessarily

If possible, avoid patch cords or cables altogether, as every connection introduces losses in the transmission. If absolutely necessary, make sure to use less than two per cable run and keep each less than five meters from the end.

8. Thou shalt terminate carefully

One of the advantages of HDBaseT's using of LAN cables is that they are easily field terminated. That means there is no need to pre-measure cables and bring all the set-up ready ahead of time, saving time & money. Make sure to use proper equipment for termination, such as cable strippers, electrician scissors, and crimpers. Also, make sure that both ends of the cable are wired according to the same scheme, either T568A or T568B. Never use both in the same installation. It is also recommended to check with HDBaseT manufacturers which scheme their products are optimized and equalized for, to take full advantage of the expected performance.

9. Thou shalt be thorough and test, test, test

Testing is crucial to guarantee both cable quality and signal integrity. Pre-testing can save hours and resources from troubleshooting any issue ahead of time. During and after installation, a professional test equipment will check connections and transmission of the installed infrastructure, beyond broken or mismatched wires, but also any hidden issues that may cause interference or loss of signal. Make sure to test every cable as it is installed and terminated, to identify individual problems as the installation goes.

10. Thou shalt be organized

Document and label all cabling components to facilitate any upgrades or expansions later, including diagrams. Remove any abandoned cables to prevent accidents or fire hazards. Avoid routing cables through pipes and holes, which may limit additional future cable runs.

11. WARRANTY

11.1 Warranty conditions

Analog Way warrants the product against any defects in materials and workmanship for a period of three (3) years from the date of purchase when used in accordance with the user's manual and standard industry practices.

- In the unlikely event of any malfunction from such defects during the warranty period, Analog Way will, at its discretion, repair or replace the defective units.
- The warranty does not apply if the product is determined to have been:
 - Improperly installed or abused,
 - Handled with improper care,
 - Used or stocked in abnormal conditions,
 - Modified, opened,
 - Damaged by fire, war, or Natural disasters (Acts of God)
- Analog Way's direct employees are solely authorized to make this determination.
- Analog Way reserves the right to refuse for repair and service a product for which the warranty is void.
- In no way shall Analog Way be responsible for direct or indirect loss of profit or consequential damages resulting from any defect in this product.

NOTE: Analog way offers a warranty extension of 2 years, it includes parts, labor and return shipping. If you are interested, please contact your territory sales representative.

11.2 Repair and return instructions

These Return Material Authorization (RMA) regulations determine the procedure to be followed when returning defective product. The aim is to ensure fast and simple handling of the returned product and bring the best satisfaction

In the unlikely event that a product is required to return for repair, please call the regional Maintenance center/Customer Service, and ask to receive a Return Material Authorization number (RMA). Three regional maintenance centers are available depending on your location. *(See chapter: 12. Contact information)*

- Before sending any device to Analog Way, please contact us to obtain a Return Material Authorization (RMA) number. Please have the model and serial number available and the reason for calling.
- RMAs are valid for 30 days, after which a new RMA must be requested.
- Package the unit securely in the original shipping materials or suitable equivalent. Analog Way is not responsible for damage which occurs due to improper packaging. The customer assumes responsibility until the unit arrives at our facility.
- Out-of-warranty products will be charged an evaluation fee if no problems are found or if you choose not to proceed with the repair.
- Discontinued products are not admitted for return and repair.
- Be sure to include the RMA number clearly on the shipping label or on the exterior of the package.
- No unit will be accepted without a valid RMA clearly visible.

11.3 Return conditions

In the unlikely event that you want to return the product, please call the regional Maintenance center/Customer Service

- If you are unhappy with the performance of any product purchased from us, you can return it within 30 days of purchase.
- Returned equipment must be in original condition with all accessories and packaging materials.
- Returns may be subject to a refurbishment and/or restocking fee.

12. CONTACT INFORMATION

13. APPENDICES

13.1 Crestron 3 series Midra™ Driver

Using this driver, software developers and integrators can easily provide powerful solutions for remotely controlling any Midra™ series Switchers through Crestron 3-series Control Systems®.

The package includes:

- The precompiled driver modules that can be used for recalling presets, selecting source inputs, changing PIP content, configuring audio inputs and outputs,
- One sample SIMPL program that demonstrates the use of all the features available within this driver.
- Two VTPro sample projects, one for XPanel and one for the Crestron Mobile Pro® application (for iPad® and Android™ devices), both running with the sample program mentioned above.
- Help files in French and English.

The samples provided are ready-to-use programs and can be freely adapted or used as a base to build your own real-world Midra™ controller application.

13.2 AMX NetLinx® Integrated Controllers Midra™ Driver

Using this driver, software developers and integrators can easily provide powerful solutions for remotely controlling any Midra™ series Switchers through AMX NetLinx® integrated controllers.

The package includes:

- The precompiled driver modules that can be used for recalling presets, selecting source inputs, changing PIP content, configuring audio inputs and outputs...,
- One sample NetLinx® Studio program that demonstrates the use of all the features available within the driver,
- Two TPDesign4 sample projects, one for AMX Modero® S Touch Panels and one for Apple® iPad, both running with the sample program mentioned above,
- Help files in French and English.

The samples provided are ready-to-use programs and can be freely adapted or used as a base to build your own real-world Midra™ controller application.
