⑤ Power Button.
Press and Hold to switch Power On/Off.

⑥ ASC Automatic Frequency Synchronization.
Press this button to establish Infrared connection between the Transmitter and Receiver.

⑦ IR Window.
This window receives the Infrared signal during ASC.

How to Wear the MBP52 Transmitter:

Slide the transmitter clip onto the belt ①, or run a guitar strap through the transmitter clip ②, as shown in the diagram at left.

Battery Replacement:

Slide open the Battery Door as shown. Install Batteries while observing correct polarity markings.

The life expectancy of two alkaline batteries is about 8 hours.

ECMR Receiver Setup:

Channel Selection

Press channel Selector button to select desired Channel. When switching Channels, wait for the Channel number display to stop blinking before using the ASC function. For best results when operating multiple systems, set every channel to achieve the maximum distance between channels.

Receiver Volume Control:

Turn Left for Output Level decrease, turn Right for Output Level increase.

Mute Level Threshold Adjustment:

The Mute Level is factory set and normally needs no adjustment. However, you may turn clockwise if interference is present.

Automatic Transmitter Setup (ASC):

Remove the access cover on the Handheld Transmitter. Point the IR Window of the Handheld towards the IR Window on the Receiver and press the ASC button.

Start by pressing the ASC button on the MBP52 transmitter belt pack. The LED on top will flash green for 15 seconds. While it's flashing, point the IR window of the MBP52 belt pack towards the IR window on the Receiver, and press the ASC button on the ECMR receiver. If you have successfully synced them, the orange RF LED on the ECMR receiver will turn on indicating a signal from the transmitter.

Note: when establishing infrared connection between the receiver and the transmitter, the distance between them should not exceed 1.64ft (0.5m). When more than one system are used, only IR window of one transmitter should be pointed to the receiver for each infrared connection.

"Only one IR Window from each transmitter should be pointed to the receiver for each infrared connection."
