## MHB-350

### 8-POINT PATCH BAY MODULE BALANCED TRS 1/4" FRONT & REAR, HALF-NORMALLED

Build your own multi-function patch bay with Hosa's **MODULAR SERIES** bay modules. Up to four modules may be mounted in Hosa's model **PPP-000** Patch Panel mounting frame for use in a standard 19" equipment rack, or forget the mounting frame and use one module as a stand-alone mini-bay! Other available modules include Unbalanced 1/4", Unbalanced 1/4" to RCA, XLR, fiber-optic, and fiber-optic splitter.

The **MHB-350** module features balanced (tip/ring/sleeve) 1/4" jacks, front and rear. It's perfect for routing balanced signal feeds to various equipment in the studio, like mixers, recorders and outboard gear.

### This is "Half-Normalling"

A "Half-Normalled" patch bay is incredibly versatile. By inserting a plug into the switching jack at the front-bottom position, you can break the "normal connection" between top and bottom at the rear. Here's a simplified example:
