

LAR150

Load-A-Rack Installation Tool

LAR150

Features

- CRS Construction
- Supports up to 150 lbs.
- Works with any EIA Standard Width Rack

Applications

The LAR150 is a must have tool for any rack installation technician that reduces workload while decreasing installation time and increasing productivity.

General Description

The Load-A-Rack 150 (LAR150) is a patent pending installation tool developed by the Atlas Sound engineering team and designed to facilitate the loading and unloading of electronic components and accessories into EIA Standard equipment racks. The LAR150 works with any full rack width equipment and easily latches to the front rails of the rack being loaded, providing perfect horizontal and screw hole alignment. The LAR150 can support gear weighing up to 150 pounds, including multiple amplifiers stacked on top of each other. The LAR150 is another example of the innovative thinking at Atlas Sound.

Specification

Height	1.75" (44.45mm)
Width	19" (482.6mm)
Depth	10" (254mm)
Depth with Handles	12.31" (313mm)
