

## IR-4000 & IR-4101 IR over coax system

Channel Vision's IR-4000 & IR-4101 transform your existing coax wiring into a whole-house IR infrastructure. The IR-4101 is placed in the room to enable the transmission of infrared remote control signals onto the same coax cable that delivers your cable TV. The IR-4000 is placed next to the devices you need to control. The resulting system gives you the ability to control devices that are located in a different room.

*How will you build your next IR over coax system?*
