

## Blackmagic Cameras Powered By ENDURA Batteries

The Blackmagic Cinema Camera and Production Camera are packed with cutting edge features but they are missing an important element - sufficient power. The cameras' built-in battery is not powerful enough for a full days worth of shooting and the cameras do not offer power outputs for powering camera accessories. This is where IDX batteries and accessories become a necessity.

Items in image:

Blackmagic Cinema Camera, Canon Lens, IDX E-7S Battery, IDX ET-PV2BM V-Mount Battery Plate, IDX TA-CA2 camera/accessory support

Power your Cinema Camera and Production Camera with IDX ENDURA Batteries by using IDX's ET-PV2BM V-Mount plate. The ET-PV2BM plugs directly to the camera via DC cable and has a D-Tap available for powering camera accessories. If you need camera and accessory support, you can use IDX's TA-CA2 support accessory.

Your runtime will depend on the battery you use and how many accessories are being powered. Below is a reference table of estimated runtimes for the camera alone.

ENDURA Battery	E-7S	E-HL9/E-HL9S	DUO-95	ELITE	DUO-150
Battery Capacity	68Wh	87Wh	93Wh	136Wh	146Wh
Camera Runtime	2.9 hours	3.7 hours	4.0 hours	5.9 hours	6.3 hours
