

MicroCue³

MicroCue3 a powerful cube. We have redesigned the MicroCue to give you an even more powerful and reliable Cueing system for you presentation. 3 USB ports will give you control of all of your presentation computers or external control. Especially for your Main, Back up and Next computers.

Connectivity - connect up to 4 MicroCue3 units on the i2Net and have a net of connectivity with a diversity of RF reception. Great for a unit near the lectern and to give a visual display to your presenter.

A clear LCD screen gives great indication of the cues. A jog wheel allows easy navigation of the simple menu system for learning handsets and other immediate features as well as lots of advanced functions if you need to.

The latest handsets have a feature that we can now take advantage of, the battery condition. We can now show you if the battery needs changing in our narrow style laser handsets. The battery indicator will tell you when to change the battery. You will still have days or longer before it fails but you have the indication.

RSSI - Received Signal Strength Indicator, this is now on the front screen, so you can see if there are any issues on the RF band. When connected together on i2Net, each screen will show all receivers and their current RSSI values.

Can be network powered or use optional DC in (12-30V) or stand alone on USB power.

Professional Presentations on the Move!

Main Features
