**Brainstorm Distripalyzer with Time Code Generator & Serial Port Preinstalled**

The SR-112 reshapes and distributes timecode through its 12 outputs, sending it over long lines with no signal degradation. It analyzes the source for quick diagnostic and generates repairs timecode, locked to video if required. The industry standard SR-112 is designed to distribute time code through its 12 buffered outputs while analyzing it. The resheraper sends clean time code, even over long cables, making it ideal for live environments. The front panel includes a large 8 digit reader and an LCD display showing the units status and reporting errors as they are detected.

**ES-249 1x8 ASCII RS232 Time Distribution Amplifier**

The ES-249 is designed to accept an RS232/ASCII signal and output up to eight identical copies. The unit has a single input and eight outputs that are accessible on rear-mounted 9-pin D-sub connectors. Due to the nature of the RS232 signal, if long runs of cable are required, it may be necessary to distribute a different time code that is then "translated" into RS232/ASCII before entering the user.

**ESE ES-198 NTP Reference Time Code Generator with Six Digits (Hour - Minute - Seconds)**

The ESE ES-198 is an NTP referenced Time Code Generator. It displays six digits (Hour, Minute & Second) of time as received via a user selected NTP server. ES-198 then generates TC90 time code. This output allows the ESE-198 to easily interface with new or existing computers, automation and clock systems. Optionally available are the RS-232 output "RS" and an NPR time code output "NPR" which may be needed for interfacing to some systems.

Radial Engineering IC-1 Line Level Isolator - Passive 1 Channel Balanced with Eclipse Transformer

The Radial IceCube IC-1 is a balanced line level isolator designed to quickly eliminate hum and buzz problems in an audio system by simply inserting it into the signal path. Measuring just over 4” x 1 ½” (10 x 4cm), the compact design begins with two super-duty glass-filled nylon XLRs at each end with heavy duty nickel-silver contacts that will not tarnish over time. Unlike other isolators that are made of plastic, the IceCube is made from solid 16 gauge steel and finished in a tough powder coat. The steel outer shell is not only more durable, it provides excellent shielding against electromagnetic fields radiated by power cables, dimmers, motors and power supplies - delivering consistently quieter results when deployed. This is augmented with a ‘set & forget’ ground lift switch to eliminate hum and buzz caused by ground loops. Inside the Icecube, a proprietary Eclipse transformer isolates the input from the output and blocks stray DC currents. While small transformers rarely perform well below 100Hz, the IceCube is exceptionally linear from 20Hz to 18kHz.

Sescom IL-19-SS Pro Audio Hum Eliminator In-line with Dynamic Structured Shielding

IL-19-SS with Dynamic Structured Shielding:
The legacy inspired IL-19-SS differs from the standard IL-19 in that it emulates the vintage Sescom all-metal tube style IL-19 from years ago. The IL-19-SS still retains the major and exclusive decoupler circuitry for hum and noise. This passive device will reduce hum and noise in environments where extreme ambient noise is present and the ground plane characteristics are required for the system integrity.

Sescom 3-Pin XLR Audio Isolation Transformers

Normal voltage differences in system grounding points between various equipment can cause small AC power currents to flow in the audio signal path. The Sescom SES-XLR-ISO-01 is a balanced XLR audio hum eliminator/isolation transformer unit designed to remove hum and buzz created by these ground loops. Sescom’s coupling transformer breaks the inter-equipment ground path rejecting noise in the input circuits while delivering pristine audio signals.

Belden’s all new 3-Piece 12 GHz RG-6 Micro BNC Crimp Connector that is suitable for HD-SDI, UHD-SDI, Video, Digital Video, SMPTE 2082-1 12 Gb/s UHDTV, SMPTE 2081-1 6 Gb/s UHDTV, and SMPTE 424M 3 Gb/s HD-SDI 1080P applications. Available as a 50-pack. This Locking Connector features a patent-pending locking design feature, a screw-lock collar to physically “lock” the bayonet nut of the BNC in position. This limits movement of the BNC head and creates coaxial alignment from the cable through the BNC center pin, delivering superior return loss performance.

The 1-piece design simplifies and speeds the installation by eliminating loose pins and sleeves. This allows for repeatable and consistent installations every time while delivering return loss performance on par with more time consuming, traditional 3-piece designs.

**Neutrik FIBERFOX Chassis Connector**

The Neutrik FIBERFOX Chassis Connector is an expanded beam multimode hermaphroditic chassis connector and suited for a vast array of applications, including Lighting, Network, PA, Video, Broadcast, Defense & Government, Railway and Petrochemical. The innovative design ensures its ability for deployment in the toughest environments where constant performance and total reliability are critical. The chassis connector is designed according to the MIL-DTL-83526 standard and fits to all other connectors with this standard.

Benefiting from the expanded beam technology and the precision optical alignment the system creates high immunity against dust, mud, liquids and other contaminations. The FIBERFOX bridge chassis connector is the first one who converts a standardized LC Patch cable into an expanded beam solution. It acts as a “feed-through” and fits into standard D-size shell.

**Features & Benefits**
- Suitable for installation and wireways without special tools
- Integration of other fiber optic systems into FIBERFOX
- No splicer, no expertise required for Installation
- Very compact design - fits in every D-hole just like opticalCON©
- Easy patching with common patch Cords (LC to LC, LC to SC, LC to ST)
- IP68 Waterproof even without a protective cap, optimized for outdoor use
- Extremely service-friendly

**Neutrik FIBERFOX Adapter Box - Fiber Channel Splitter**

The Neutrik FIBERFOX Adapter Box is a ruggedized and weatherproofed FIBERFOX Adapter BOX split fiber channel point-to-point connection to extend cable length. Expanded beam fiber optic connectors utilize a lens to expand and collimate the light emitting from an optical fiber. This collimated light beam is transmitted through an air gap to a mating connector, where the light is collected and focused by a second lens into a second optical fiber to complete the connection. The effect of collimating and greatly increasing the beam diameter, means that the connector is less sensitive to small particles of dust or other contamination which could completely obscure transmission in physical contact type connectors.

- Cables are direct prolongable, no couplers required
- Wear-free connectors, > 5000 mating cycles without any maintenance
- No special cleaning or measurement tools required
- Compatible with 2CH FIBERFOX System and all MILD LT-83526 Systems

**Features & Benefits**
- Standardized to FIBERFOX 83526 System
- Compact and rugged design
- Weatherproof, IP68 protection
- Cat5e cable shielded connection
- 3 Foot (90 cm) high reliability cable with crimp contacts
- Comes preassembled for quick installation

The all new NeutrikFIBERFOX Expanded Beam Fiber Optic Connectors are designed to meet the requirements of MIL-DTL-83526 Military Specifications. Expanded Beam fiber optic connectors are designed to operate in harsh environments. They use non-physical contact fiber optic termini that are IP68 sealed behind an anti-reflective coated ball lens.

This lens expands the beam to many times its original size aiding optical alignment and minimizing the effects of dust, debris, and other environmental conditions. Because there is no wear on the optical surfaces / end faces of the termini during use, the FIBERFOX connector has excellent durability, in excess of 10,000 mating cycles, providing a long service life interconnect solution. FIBERFOX is a hermaphroditic connector allowing multiple plug-to-plug cable assemblies to be combined to extend the length of the system. These connectors are available in two or four multimode lenses.
**opticalCON DUO LITE to DUO Fiber Optic Tactical Cables**

Camplex Neutrik FIBERFOX OM3 Multimode Expanded Beam Fiber Optic Cables

Stadium venues, live entertainment theaters and television broadcasters are now switching to expanded beam fiber optic systems as the reliable choice to carry critical video, audio and data signals. At the forefront of this next generation sits the Camplex line of FIBERFOX expanded beam fiber cables. It’s an extremely durable, yet flexible cable designed to handle all of your signal transmission needs at extreme distances.

At the heart of the FIBERFOX cable by Camplex is its EBC lens system which always ensures reliable system functionality even in harsh environmental conditions like rain, cold, heat, dust, mud or below water. This is a welcome change to traditional fiber systems where environmental challenges can often inhibit signal transmission. FIBERFOX EBC connectors comply with IP68 (connected or disconnected) and can be cleaned easily and quickly by using clear water and a lint-free cloth only. Detailed measurements or the use of special cleaning tools are not necessary!

The FIBERFOX connector can also achieve greater mating cycles (> 10,000 without change of insertion loss) which makes it a great fit for rental and staging companies. It’s a virtually wear-free, maintenance-free system! The connectors are MIL-DTL-83526 compliant, so they are following the worldwide standard for expanded beam connectors.

Camplex QPC QMini & QMicro Expanded Beam Fiber Cables

Broadcasters, engineers, stadium venue techs, live event production teams and system integrators are among those joining the migration to expanded beam cables from Camplex. Expanded Beam systems offer less downtime as a result of dirt and contamination while offering the same rugged cable core in other tactical offerings.

The Camplex QMini series features QPC’s QMini Expanded Beam Fiber Optic Connectors, which are designed to meet the requirements of MIL-PRF-83526/20 & /21 Military Specifications. This connector utilizes non-physical contact fiber optic termini that are fully sealed behind an anti-reflective coated ball lens. This lens expands the beam to many times its original size aiding optical alignment and minimizing the effects of dust, debris, vibration, and other environmental conditions. Because there is no wear on the optical surfaces / end faces of the termini during use, the QMini connector has excellent durability, in excess of 3,000 mating cycles, providing a long service life interconnect solution. The QMini is a hermaphroditic connector allowing multiple plug-to-plug cable assemblies to be combined to extend the length of the system. The QMicro is an even smaller version of the QMini connector. It is also hermaphroditic connector allowing multiple plug-to-plug cable assemblies to be combined to extend the length of the system.

**CAIG Products DeoxIT® Fader 142g Spray**

DeoxIT® Fader is a precision lubricant specifically formulated to improve conductivity and lubricate conductive plastic and carbon compound faders, switches and other similar components. Over time these components lose their original lubrication from wear and/or repeated cleaning. Dust, dirt, drink spills and other contamination also degrade the components’ lubricant. The need for re-lubrication is necessary to avoid excess wear and abrasion to the plastic surfaces. Another use for DeoxIT® Fader is on conductive membrane switches and components. Oil, grease and acids build up on the membrane surfaces due to repeated finger contact and can lead to device malfunction.
