Green Glue RGG400200 Noiseproofing Sealant

It takes just minutes to apply Green Glue Noiseproofing Sealant along edges and cracks. It dries completely in 48 hours. No training is necessary to use Green Glue Noiseproofing Sealant: it is applied in the same fashion as standard caulk material. The sealant comes in 28-ounce tubes that fit into quart-sized cabling guns. Clean up is simple with just soap and water, even when wet. It can be painted over once dry. Adding Green Glue Noiseproofing Sealant to your soundproofing project can reduce noise transmission by 100 times or more. Green Glue Noiseproofing Sealant exceeds LEED green building requirements and has been independently tested by Underwriters Laboratories for fire safety and environmental impact.

Green Glue Acoustic Glue 28 Ounce Tube

Green Glue is a constrained layer damping system, which as a damping material is sandwiched between two other rigid materials such as two sheets of drywall or any other porous building material. Damping occurs when the viscoelastic center of the “sandwich” is sheared. Green Glue works effectively against any impact or airborne noise control problem. Green Glue can be used over any existing wall, floor or ceiling by simply adding another layer of material. No rolling, painting or troweling is necessary. Just open the tube and apply in a random pattern. With a fast and easy installation, anybody can soundproof a room with Green Glue.

Green Glue Noiseproofing Joist Tape 100 Feet x 1-7/16-Inch

One of the biggest noise complaints is the sound of footsteps and squeaky floors. The squeaking that’s driving you crazy occurs naturally when floors settle, and joists rub together with subflooring. There’s an easy solution: Green Glue Noiseproofing Joist Tape. The tape creates an airtight seal and dampens foot traffic, so that annoying squeaking becomes a thing of the past.

Introducing the RackLink Power Management System from Middle Atlantic Products - a practical web-enabled power management system that sets a new standard for A/V installations. Set it up in less than 5 minutes and it will monitor the power and temperature conditions of your system, log and alert you to any irregularities, and even reboot or take another action to correct problems on its own.

We’ve made it easy to set up and operate, with an open architecture that integrates seamlessly with leading control systems - even your smartphone and is compatible with ‘cloud’ based services but is not dependent on them.

Amphenol 12G High-Frequency HD-BNC Connectors for Broadcast

Ultra High Definition Video (also known as "Ultra HD" or "4K"), with 4x the resolution of 1080P HD video, requires an interconnect system that can transfer data at a rate of up to 12 Gbps. Using legacy BNC connectors often supporting a max frequency of 3 GHz, this could require 2 or 4 channels.

Amphenol RF’s line of 12G BNC and HD-BNC products are optimized for 4K Ultra HD Broadcast, providing fully intact signal transmission on a single channel. These connectors are designed for 12G-SDI video applications, and come in a variety of PCB mounting and cable terminations. Peak performance can be reached when Amphenol RF 12G connectors are used as a mated pair.
